

# Offers Total Control Over Tough Vegetation!

Tiger WetCut™ mower attachment is the answer to Roadside Vegetation Control. The WetCut system offers two methods of control in a single pass and can be added to any side, rear and/or a boom mower.

## WETCUT FIXED ZONE

Cut-stump application

## WETCUT OFFSET

Broadcast application

Eradicate the weeds while they are young and less costly to control. Apply when the time is right and maximize your control over tough vegetation early while you are mowing. The Tiger WetCut system gives you the ability to apply selective brush control as a cut stump method or broadcast application to the right in the un-mowed area.

# Tiger Specifications

Spray Chamber attaches to Flail or Rotary Cutter Head.

Offset Sprayer can reach weeds up to 14 feet from the right of the mower deck.

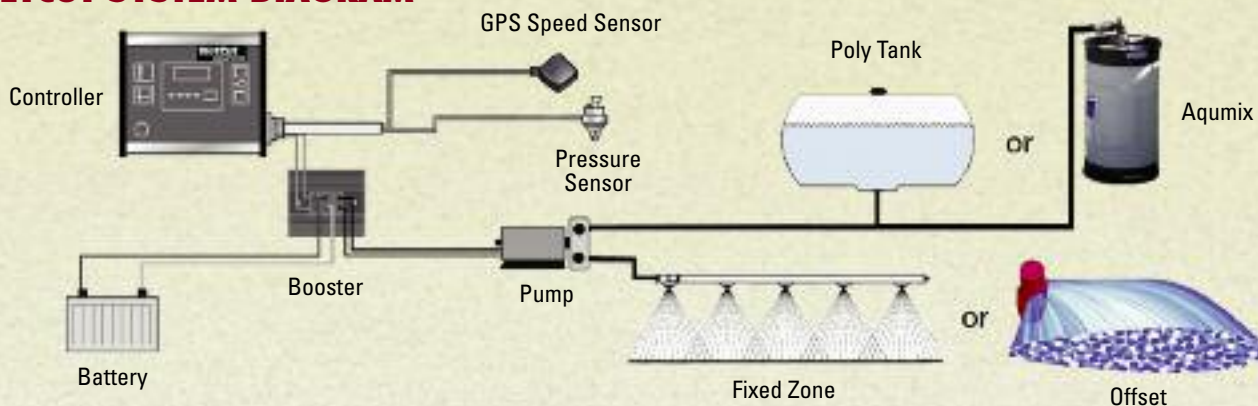

Aquimix (Ready to Use) System attached to the tractor's 3PT.

50, 100 & 150 gallon Tank mix systems are available for the tractor 3 PT hitch.

With a single flip of a switch, the WetCut Computer controlled system accurately applies the target rate. The digital display keeps the operator informed on the vehicle speed, system pressure and the GPA (gallons per acre) being applied.

## WETCUT SYSTEM DIAGRAM

- Delivery system consists of a 12 volt positive displacement pump controlled by an automatic rate control system with a pressure sensor and GPS speed sensor.
- Available with three different poly tank sizes or with the Aquimix System.
- Spray controller provides a digital read out of the application rate, system pressure and the vehicle miles per hour. Chemicals are applied through a fixed zone spray chamber or single offset nozzle.
- Ideal for applicators who want the precision of computerized rate control with the flip of a single switch.

**LET TIGER'S PROVEN DESIGNS HELP YOU CONTROL COSTS BY PROVIDING BETTER AND MORE TIMELY CONTROL OF UNDESIRABLE VEGETATION.**
