# Quality Product & Warranty

**Design:** SeaHunter's offshore hull design is a full padded v-bottom with a stepped transom. Our hulls are about 10 to 15 percent faster than regular v-bottom or abbreviated hull design (full stepped hulls). The sharp entry (60 degrees) and deep-vee at the transom (24.5), combined with our oversized chines allow a smooth, dry ride at any speed. SeaHunter's Flats & Bay boat utilizes a series of Chins as well as our signature stepped transom which allows shallow operation with out sacrifice to rough water or dryness. The above result is an extremely fast and smooth riding boat born to hunt on the Flats or open seas. Everything is designed with performance and Safety in mind. SeaHunter demands from each model more operational hours with increased fuel economy and overall performance.

# Quality Product & Warranty

**Construction:** SeaHunter's VAULT construction is the most advanced technique available. Each SeaHunter is made with 100% vinylester resin, Kevlar, Carbon Fiber and corecell foam. Components of the boats are bonded together mechanically (thru-bolted), weld-on and Vacuumed. All open areas and voids are filled with 4lb closed cell marine foam to make the boat quiet and unsinkable. The hardware is all 316 stainless and the fuel tanks are .250" aluminum. The rigging on our boats is a work of art. The wiring and switches are of the highest quality in the industry. SeaHunter is proud to be NMMA certified. Seahunter boats are built to give years of trouble free performance and are backed up by a lifetime structural warranty for pleasure use.
