ENGINEERED TO PERFORM:

Designed with tapered, clean lines to reduce grease build up. Heavy gauge steel body built with wrap around end panels for extra strength, and continuous welded inside seams to prevent leaks.

HEAVY DUTY POLY & STEEL LIDS

One-Piece Poly Lid-Styled with a slope and curved design that covers the entire top of the container and provides a 2" extended drip ledge to keep containers free from grease spills. The metal lid latch assembly provides a hook for padlocks to discourage unauthorized opening.

Par-Kan poly lids are lightweight, but strong, and are interchangeable with most steel lids. Lids are shipped fully assembled for your immediate use.

Anti-theft heavy duty steel lids are also available for all grease container sizes.

SUITABLE USES

Restaurant grease storage, used motor oil and oil filter collection. Food and produce disposal are other uses of this container.

VARIOUS SIZES

Available in 400, 294, 208 and 106 gallon containers.
