Main

ReachMaster introduces the ReachMaster Basic DL72N as the latest lift in its range of extreme compact aerial work platforms. The ReachMaster Basic DL72N represents an excellent combination between compact format, 72 work height and value. Its compact width of only 2.9 feet allows for access through single doors, and its light weight will allow for travel and set-up on virtually any surface. The multi-adjustable outrigger system will allow for setting on uneven surfaces, and its standard all-wheel drive (3 wheel drive) will easily get it to its work area. A perfect solution for shopping malls, airports, entertainment facilities and churches with moderate reach requirements and limited access.

As with any ReachMaster product, safety is our number one concern and priority. The ReachMaster Basic DL72N is equipped with an automatic safety system that adjusts reach capacity according to basket load. Double safety devices on both electrical and hydraulic systems in combination with break hose valves and pressure control valve systems provide maximum protection for the operator. Proportional control allows for smooth and pleasant aerial operation.

A wide range of options, including electric power, water or air to the basket, alternative power supply and battery options, allows you to tailor the lift to your specific application and needs.
