Main

ReachMaster, Inc. proudly introduces the new TM-100 truck mounted aerial lift. The TM-100 is the first 100 foot telescopic aerial lift to be mounted on a 19,000 GVW chassis of your choice.

The new ReachMaster TM-100 lift is a product of a joint technological partnership between M&M Lift, Inc. and the parent company of ReachMaster, Inc., WorldLift Industries A/S in Denmark, which also owns the Denka Lift brand. M&M Lift, Inc., a Los Angeles based company, has established itself as a well known manufacturer of truck based lifts, while the Denka Lifts has made it trademark as one of the lightest boom systems in the world, made of specially extruded aluminum profiles. By combining the two technologies, the TM100 represents the first example of a completely new product category of tall lifts on light trucks that can be supplied with 2WD or 4WD, and be customized with tool boxes and other industry specific equipment.
