

Control4® MyHome

The MyHome family of apps give a convenient and flexible way to turn your smart phone, tablet, or computer into the familiar and graphically-rich, Control4® touch interface. MyHome apps are an affordable way to add more screens to interact with and manage your home automation system, including lighting, temperature, music, movies, energy, security and more.

In a Control4-enabled smart home, MyHome apps work with your system over the Wi-Fi network in your home. All this happens securely because only authorized devices can connect to your system. With either a single device or multiple-device license (site), it's easy to control your home from an iPhone, iPod Touch, iPad, Android smartphone or tablet, or a PC or Mac.

Control4® MyHome Compatibility Matrix

	iPhone/iPod	iPad	Android	PC/Mac
Lighting	Yes	Yes	Yes	Yes
