When using a Toslink (EIA-J) fiber optic cable, it is the "one" most important audio cable in your system. The sound quality of all the channels, whether two or five or more, are dependent on this one cable to deliver an undistorted, smooth, clear and dynamic performance.

The 217 polymer fibers in OptiLink 3 are unprecedented in their ability to transmit an undistorted signal. Any fiber optic cable can transmit light or dark, but the ability to preserve information is not at all equal.
