

## Wireless Two-Way Intercom

- Wireless two-way intercom throughout the facility
- Can be used for school-wide instant voice notification
- Cost effective solution - no wires to run!
- Easy intercom station installation or relocation

Visiplex's PageLink system offers schools the ability to incorporate two-way intercom communication throughout the facility, providing the benefits of improved communication and safety in addition to reduced maintenance costs. This unique wireless school intercom system can be installed as part of the school public address system or as a stand-alone solution. The system can function with multiple zones and has the ability to communicate with each specific intercom station individually. As a wireless solution, this intercom system offers easy installation and expansion without the need to run any wires.

## Wireless Bell System

- Wireless bell and clock time synchronization
- Programmable weekly or calendar bell schedule
- Utilizes wireless PA speakers for bell tones and alerts
- Easy and cost-effective installation and expansion

Visiplex wireless bell systems offer an easy way to upgrade or replace an existing school bell system, using wireless speakers and a bell controller to create a powerful school break bell system with programmable schedules and various alert tones. Using the same time synchronization signal that is used for the school clock system, the school bell system will initiate bell tones in full synchronization with all school clocks. The Visiplex wireless bell system offers four, fully programmable, seven-day schedules of up to 48 bell tones per day, or a 365-day schedule design with up to 42 bell tones per day. Tone schedules can easily be programmed from a PC or over a local network.
