

THZ-100

ADVANCED THERMOSTAT

Comfort, convenience and luxury — a thermostat as individual as you are

URC's THZ-100 advanced thermostat is colorful, bright and easy to use when combined with URC's Total Control integrated system. Now you have the ability to control the climate from anywhere within your home or business environment in a way like never before.

With dozens of advanced features, the THZ-100 is as smart as it is handsome. It features Intelligent Comfort Recovery, which means that when you set schedules, it monitors the current environment and then it intelligently slowly heats or cools accordingly, with dollar-saving efficiency, until it reaches your preset. Additional features include password protection for homes or businesses where access must be limited, and optional wired remote sensors to increase efficiency and accuracy of programmed temperature adjustments.

Control your personal climate from anywhere

Imagine being able to control the temperature of your home simply by picking up a remote control while watching TV from the comfort of your sofa. No more shivering under the covers; press one button on a

bedside remote and make your room toasty. And, the automation possibilities are endless – imagine having the drapes automatically close when the air conditioner kicks on, to help cool your home more quickly and save energy! For the ability to set the climate from anywhere, look no farther than the THZ-100 coupled with the Total Control system.

Easy on the eyes

With a brilliant, 2" color LCD, the THZ-100 is oh-so easy to read and looks wonderful on any wall – at home or at the office. The background graphics and colors on the full-information LCD display automatically change to indicate visually whether the system is heating or cooling during transitions. It does everything – except control the weather. For the utmost in comfort and convenience, install a URC advanced thermostat and our whole-house system to enjoy total control of your environment.

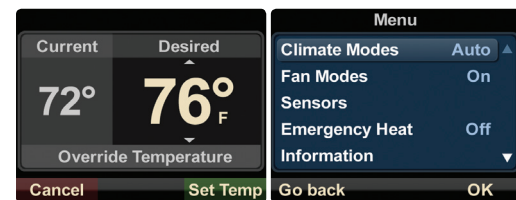

THZ-100 ADVANCED THERMOSTAT
