SmartRack Rack Enclosures

Speed Installation

SmartRack Enclosures ship ready for rapid deployment and roll into place on heavy-duty casters. Toolless mounting slots speed installation of vertical PDUs and cable managers. Adjustable mounting rails include easy-view indexing that eliminates time-consuming measurements of rail depth. Lightweight modular doors and side panels provide safe,

Mounting Slots

convenient service access. Integrated baying tabs facilitate combining enclosures in rows. Seamless compatibility with all standard 19-inch rack equipment ensures trouble-free configuration.

Support Critical Systems

SmartRack Enclosures support advanced cooling, cable management, power distribution and monitoring features that keep your critical servers, storage and network/telecom equipment operating around the clock. Perforated doors permit massive front-to-rear airflow that exceeds server manufacturer requirements and supports hot-aisle/cold-aisle configurations for superior data center cooling efficiency.

.........

- 12U, 25U, 42U and 48U sizes
- Load rating up to 3,000 lb
- Toolless mounting slots for vertical PDUs and cable managers
- Perforated doors for massive front-to-rear airflow
- Standard, Expansion, Compact, Deep, Wide, Deep & Wide, Colocation, Knockdown, Shock Pallet and Thermal Duct models

Cool Your Equipment

Thermal Duct Rack Enclosures (SR42UBTD, SR42UBWDTD and SR48UBTD) route warm exhaust air directly to your facility's HVAC return air stream. An adjustable overhead duct isolates warm air to prevent it from recirculating. Natural convection removes heat and keeps equipment cool without using electricity or generating additional heat. For Rack Enclosures that don't have direct access to an HVAC the Heat return duct, air (SRFANDOOR) Removal Door supercharges airflow with four centrifugal fans housed in a

Thermal Duct Rack Enclosure

sealed rear door. The maintenance-free Compact Air Conditioning Unit (SRCOOL12K/SRXCOOL12K) cools rooms without access to facility HVAC, provides supplemental cooling for overheated rack enclosures and focuses cold air on equipment hot spots. (See pp. 11-12 for more information.)

SmartRack Enclosures accommodate all standard 19-inch rack equipment, regardless of vendor.

Provide Extra Depth & Width

SmartRack Deep (SR42UBDP), Wide (SR42UBWD) and Deep & Wide (SR42UBDPWD) Rack Enclosures accommodate deeper servers, blade server chassis, large network switches and high-density installations while providing ample space for PDUs, cables and cable managers without obstructing airflow. Enclosures with extra width have side channels for accessory mounting, cable routing and airflowideal for network switches that have side-to-side airflow and forward-facing ports.

Deep & Wide Rack Enclosure

Support Colocation

Specifications

SmartRack Colocation Enclosures (SR42UBCL and SR48UBCL) are divided into secure upper and lower compartments (20U or 23U each) with separate, lockable doors and side panels. Divided compartments allow you to maintain the physical security of installed equipment for multiple tenants within a single enclosure footprint, increasing installation flexibility and profit potential. They can also be used to divide equipment by security level or workgroup. (See **[]** on pp. 6-7 for more information.)

Ship with Pre-Installed Equipment

SmartRack Shock Pallet Rack Enclosures ("SP1" and "SP2" models) ship with a special reinforced pallet and loading ramps, allowing you to preinstall equipment and reship the rack enclosure to the final installation site. The standard "SP1" pallet supports up to 1,250 lb during shipment, including the weight of the rack enclosure and all pre-installed equipment. The heavy-duty "SP2" pallet supports up to 2,000 lb during shipment. (See M on pp. 6-7 for more information.)

Install in Confined Spaces

Some of the most difficult installations involve older buildings that weren't designed for IT equipment. Cramped rooms, low doorways, narrow halls and steep staircases all make transporting and installing rack enclosures difficult, if not impossible. Knockdown Enclosures ("KD" models) ship flat in several subassemblies, allowing convenient transport and guick reassembly. The detail work is already finished, so an experienced installer can assemble a Knockdown Enclosure in 45 minutes or less.

SmartRack Compact Rack Enclosures (SR12UB) are perfect for branch-office and back-office applications where space is limited. They store up to 12U of equipment in locations where larger enclosures won't fit, including under desks, tables and counters.

(1) Optional SREXTENDER accessory increases maximum mounting depth and external depth by 8 in. See p. 15 for more information. (2) Special Application Enclosures are similar to models listed at the top of the column, with the following differences: Colocation Enclosures are divided into two compartments (upper and lower) with separate, lockable doors, Knockdown Enclosures ship disassembled into several sections for easy transport and assembly in confined spaces. Shock Pallet Enclosures include a reinforced shipping pallet and loading ramps, allowing pre-installation of equipment and reshipment to the final destination. The pallet supports up to 1,250 lb during shipment, including the combined weight of the enclosure and pre-installed equipment. Heavy-Duty Shock Pallet Enclosures increase the shipping pallet capacity to 2,000 lb. Thermal Duct Enclosures include an overhead duct that routes warm exhaust air to your facility's air conditioning return stream, providing superior heat removal and thermal isolation. The adjustable duct increases unit height by 20.5 to 34.5 in. and increases unit weight by 65 lb.

Feature Focus

A Adjustable Mounting Rails (4) with Easy-View Depth Index

Front and rear sets of vertical rails adjust in quarter-inch increments. Adjustment is quick and convenient—simply unscrew the rails, slide them to the required depth and refasten. The easy-view depth index ensures consistent rail placement without requiring time-consuming measurements. Square mounting

Easy-View Depth Index

holes and included hardware support standard 19-inch rack installation.

B Toolless Mounting Rails (2) with Easy-View Depth Index

Adjustable rails include toolless mounting slots for quick installation of compatible PDUs and cable managers. The easy-view depth index ensures consistent rail placement without requiring time-consuming measurements. Mounting slots are arranged in a standard pattern compatible with a wide variety of accessories. Each rail can mount two

Toolless Mounting Button on Tripp Lite PDU

vertical PDUs or cable managers side-by-side (four per enclosure).

C Roof Panel (Removable)

Spring-loaded pins allow the roof panel to be removed and replaced in seconds. The roof includes cable access channels and mounting slots for external cable managers.

D Front Door (Lockable/Removable/Reversible)

The door is perforated for optimal airflow, exceeding server manufacturer requirements. The door handle is reversible to preserve standard orientation if the door is reversed.

E Split Rear Doors (Lockable/Removable)

Split rear doors reduce clearance requirements for service access. The doors are perforated for optimal airflow, which exceeds server manufacturer requirements.

Modular Side Panels (Lockable/Removable)

Modular side panels are smaller and lighter than full-length side panels, enabling easier installation and service access. Most 42U and 48U models include four side panels; most 25U models include two. ("EXP" models do not include side panels.)

G Baying Tabs (2)

Baying tabs allow Rack Enclosures to be combined securely in rows. The center-to-center width of standard-width models can be set at 600 mm or 24 inches to match standard data center floor tiles.

Heavy-Duty Casters (4) & Levelers (4)

Casters support a rolling load up to 2,250 lb, allowing enclosures to be pre-configured and rolled to the final installation location. Levelers support a stationary load up to 3,000 lb and adjust to improve enclosure stability. Casters and levelers are removable.

Convenient Grounding System

All components are grounded to the

enclosure frame, which includes mul-

tiple connections for facility ground.

Front and rear doors include guick-

release ground wires for convenient

You can attach the included stabilizing

brackets at the bottom of the enclosure

frame (inside or outside) to improve

stability. The optional SRBOLTDOWN

kit allows you to bolt the brackets to the floor. For maximum stability, add

the optional SRSTABILIZE Anti-Tip

Stabilizing Plate Kit. (See p. 15 for

J Stabilizing Brackets (2)

configuration.

Quick-Release Ground Wire

Bracket Mounted Outside

Bracket Mounted Inside

K Thermal Duct Enclosures

more information.)

Thermal Duct Enclosures (SR42UBTD, SR42UBWDTD and SR48UBTD) include an adjustable overhead duct that routes warm exhaust air to your facility's HVAC return air stream, providing superior thermal isolation and cooling efficiency for hot-aisle/cold-aisle data center configurations. Natural convection removes heat and keeps equipment cool without using electricity or generating additional heat.

Colocation Enclosures

Colocation Enclosures (SR42UBCL and SR48UBCL) are divided into two compartments (upper and lower) with separate, lockable doors. This allows you to maintain the physical security of installed equipment for multiple colocation tenants.

M Shock Pallet Enclosures

Shock Pallet Enclosures ("SP1" and "SP2" models) include a reinforced shipping pallet and loading ramps, allowing equipment pre-installation and reshipment. The "SP1" pallet supports up to 1,250 lb during shipment, including the weight of the enclosure and pre-installed equipment. The heavy-duty "SP2" pallet supports up to 2,000 lb.
