

VNS2263 - Wireless High-Power Two-Way Intercom Station

VNS2200

The **VNS2263 Wireless High-Power Two-Way Intercom Station** is designed to provide two-way communication for applications where the installation of traditional hard-wired intercom systems is impractical or too costly.

When the VNS2263 is used with a main wireless paging controller, such as the **VS4800**, two-way high-power communication between the main paging controller and an intercom wall station (or emergency call box) becomes available. The main paging controller can also initiate one-way communication to a group of intercom wall stations.

The VNS2263 is controlled by the VNS2200 wireless audio/visual controller to provide simple, reliable and cost-effective alternative solutions to traditional wired intercom systems.

Key Features:

- Hands Free Two-Way Communication
- One-Way Group Communication
- Integrated Speaker and Microphone
- Weather Resistant for Indoor and Outdoor Use
- Extended Range

Options, Accessories and Complementary Products:
