

# Racks

19

The solid Burmester racks are a logical continuation of the integrated audio systems design philosophy. Experience

has shown that the best sound quality emanates from a stable construction made of aluminium and furnished wood.

The story of the Burmester racks began with Dieter Burmester's Reference Line setup at home. As a result of its positive tonal

and visual features, this private project soon took on a life of its own, and led to a new and separate product.

All of the racks can be supplied with surfaces made of Elsberry or Macassar, and there is a special edition in white Carrara.

Please enquire about other finishes, which can be specially made to order.
