

Resyn

Networked Loudspeaker Management Control Software

Resyn control software featuring Effortless Ethernet is available for use with dSPEC. Effortless Ethernet automatically configures the network settings, requiring no previous knowledge by the user of networking or network settings. Resyn's engineered workflow walks the user through the process of selecting loudspeaker types and models, labeling inputs and outputs, setting protection levels, establishing system EQ, configuring user presets, and creating access passwords. Resyn represents a major step forward in assisting audio professionals to quickly obtain the results they need to make their work as successful as possible. Resyn is designed to be easy to use for less experienced users but with all of the full featured settings and controls that advanced users demand.

Resyn can be obtained by downloading from www.communitypro.com or by contacting Community for a free CD-ROM.
