

Draper Lifts for Projectors and Flatscreen Displays

Draper offers the most sophisticated, comprehensive and functional line of lifts for projectors and flatscreen displays. Seven different models of motorized projector lifts are designed to help you mount the projector of your choice at or above the ceiling line, in a table top, or in a wall.

Revelation

You won't see or hear the projector.

The Draper Revelation permanently conceals the projector (and its noise) above the ceiling at all times. You won't see or hear the projector. You'll only see a hinged door in the ceiling, finished in white.

At the heart of the Revelation's dual first surface mirror system are two optical-grade glass mirrors that are 94% reflective. This mirror system provides for optimum flatness and reflectivity.

System Options

- **Environmental Airspace Housing**—Aluminum housing isolates projector from environmental airspace above ceiling. Includes intake and exhaust fan systems.
- **Glass Shield**—Made of anti-reflective glass and installed between the Revelation and the mirrored door. Reduces projector noise by an additional 80%, and further guards the projector. Virtually none of the projected light is lost as it passes through the Shield.
- **Ceiling Access Door**—2' x 2' hinged door provides above-the-ceiling access for cleaning, maintenance or repairs while preventing ceiling damage. Available in white finish or recessed to accept ceiling tile.
- **Controls**—Includes 1 wall switch. See website for other control options.

U.S. Patent No. 6,379,012.

FlatScreen Lift

Conceal a flatscreen inside your own cabinetry or furniture, and raise it into view for "showtime."

Always aiming high, Draper's FlatScreen Lift far surpasses the competition. Its "stored" dimensions are significantly more compact, and yet the maximum extended height is greater than any other model currently available.

Draper's FlatScreen Lift is available in three sizes, accommodating virtually any available model of display up to 65" diagonal. Features easy "drop-in" installation into your cabinetry or furniture, and a unique customizable secondary shelf beneath the display.

Draper's FlatScreen Lift offers smooth acceleration and braking, which prevents "jarring" of the display during operation. In addition, Power Surge Line Overload Protection is built in, preventing spikes in power from damaging your television.

System Options:

- **RS232 and IR remote control** optionally available.

US Patent No. 7,128,003.
