Content from seven reading programs included with the AV2

The Next Generation CardMaster

Teachers love the digital version of the CardMaster card reader – the AV2. Performing the same tasks as its analog predecessor, it has the look and feel of the electronic handhelds that today's students are used to. The AV2 supports Adobe® flash, so it can download and play interactive content from your favorite educational publishers. It can also record, store, and play videos, music, and photos. The AV2 integrates hearing safety in all audio playback modalities with built-in 85dB protection. Content from seven reading programs are included with the AV2.

The Original CardMaster™

Trusted by thousands of teachers and reading coaches, our original CardMaster card reader is still being used to enhance language instruction, particularly ELL/ELD programs. This proven, reliable technology models oral fluency for students. A built-in mic records student responses so they can compare their answers to correct pronunciation. Teachers can set this up as an independent, self-checking learning center or it can also be used as a diagnostic tool for appropriate intervention.

8201 MP4 Player/Recorder

Your students are digital natives and have a high level of expectation that they will use technology in school. The cornerstone of Califone technology and service is to ensure that schools have flexible, dependable and easy-to-implement audiovisual support tools.

Creating audio files and podcasts to showcase student learning is central to the Common Core standards. The ability to synthesize and share information is a 21st century skill that will now be required of all students to ensure that they are college and career ready when they graduate. Help your students master reading, speaking and listening skills with the Califone MP4 Player/Recorder.

The 8201 comes with a built-in microphone for a variety of uses; students can create podcasts for a project-based learning activity, a speech pathologist can track a student's progress, or a teacher can record audio notes to email to parents. Since hearing safety is so important, the built-in Sentinel™ technology restricts the volume of playback to the ASHA recommended 85dB maximum. Using our MP4 Player/Recorder is a fun way to put students on the fast track to learning success.

8204 4-person MP3 Learning Center
(includes foam-lined storage case, 1114AVPS jackbox & four 8200-HP headphones) \$310.50
