

Listening Centers without Media Players

Extend the usability of your equipment by plugging your own audio source into a jackbox with connected headphones for differentiated instruction. Computers, tablets, and smartphones can be used for ELL/ELD and other language learning activities by using jackboxes with attached headphones.

Sound Alert™ Monaural Listening Center

Teach students safe listening practices and guard against accidental hearing damage with this groundbreaking Sound Alert Listening Center. A bright red LED warning light appears when sound exceeds 85 decibels, the recommended limit for student hearing. The warning light alerts both the student and the teacher to an unsafe volume level. The durable Sound Alert jackbox can also be used as a traditional jackbox without using its power adapter, but the warning light feature will not operate in this mode.

The 8-position learning center is ideal for tutorials, literacy groups, language lessons, story time, special education, and ELL/ELD applications. A jackbox and eight matching 2924AVG monaural headphones are included in a rugged ABS plastic case.
