

VERIS 2

Versatile Cost-Effective Permanent Installation Systems

Community's VERIS 2 family is a comprehensive range of cost-effective small-to-medium sized loudspeakers that are precisely engineered for versatile array construction, while aesthetically styled to meet modern architectural demands. A powerful resource for the professional contractor, each VERIS 2 model features Community's unique, optimized full-range voicing system. Community's proprietary 1-inch exit UC1 HF compression driver, patented Carbon Ring Cone Technology™ LF drivers and common-architecture crossovers are used across all models to achieve a level of voicing consistency that is unprecedented in this price point. VERIS 2 delivers quality, low distortion, high-impact sonic capabilities to any installation application.

Available models start with the V2-6, a single 6-inch with an HF driver in a compact enclosure. Next are a dual 6-inch, a single 8-inch, and a dual 8-inch. These four models each include a rotatable horn for horizontal installation, are shipped with a yoke mounting bracket as an included accessory, and can be ordered with an optional low distortion, low insertion-loss internal autoformer for 70V/100V applications. The larger 12-inch and 15-inch VERIS 2 models offer a choice of large format horns; 90° x 60° and 60° x 40° for the two-way systems and 90° x 40° and 60° x 40° for the three-way systems. Three low profile subwoofers, including a dual 10-inch, dual 12-inch and dual 15-inch, round out the line with their astonishing LF performance.

VERIS 2 offers a wide range of rigging systems and brackets, all engineered for quick and convenient installation. All models are available in black or white, and are equipped with a generous number of rigging points. This high performance loudspeaker family offers great musical sound quality at a great price.
