Diggiditto™ document cameras

Both feature Califone-brand innovation and dependability.

Document cameras are terrific support tools for project-based learning. Research, content development and creating a presentation are essential project-based learning functions that are supported by our document cameras. Califone also helps schools assess student performance and guide instruction by capturing student data with our Smart Document Cameras. Teachers know that integrating visual media increases information retention so they use our high-performing visual solutions to aid their instruction in science, math, fine art, literature and writing. The Diggiditto DC596 document camera assists teachers in personalizing instruction for differentiated learning. In partnership with GradeCam™, Califone offers a free 6-month trial of specialized software that enables teachers to quickly and effectively assess and record student performance. The GradeCam software instantly enters the data into electronic gradebooks that teachers are already using, saving them a significant amount of time over the school year.

Diggiditto DC596

ELA standards emphasize the development of the ability to gather and synthesize information to share with others. Mastery of this skill is key to student readiness for college and career.

You will find all the hardware features you'd expect in a leading document camera, but this Califone document camera includes additional proprietary software that enables you to use it as a content development tool. You can easily record movies (wmv files), recognize images, and link to sounds. Play back student – or teacher-created presentations and use Skype®. The DC596 has a small footprint, an adjustable mounting stand, and a USB connection for computer capability. DC596 Windows 2000/XP/VISTA/7/8 compatible
