

WHY CHOOSE BRETTFORD'S QUATTRO VOLTEA TABLE?

Security and Organization

Tables feature a 6" deep door that flips up to expose a fully enclosed cord management bin running the length of the table. Cord bin grommet holes allow easy wiring and door cut outs prevent the need to thread cables through a grommet hole. The door key locks to prevent tampering and all tables are keyed alike for easy management.

Space Smart

Quattro Voltea computer tables are available in a 24" depth to allow five rows in the space four 30" deep tables require and are sized for up to three students, allowing you to lower your cost per student. Also available in 30" and 36" depth.

Multiple Finish Options

Quattro is available in five standard finishes or special order in any Bretford paint, laminate, and trim color to enhance your decor. A complete list of finishes are available at www.bretford.com, search word "Voltea."

Accommodating

Work surface is adjustable from 24" to 32" in 1" increments for use by students or adults and an optional CPU holder mounts under the table to hold towers up to 11" wide. Caster kits are available for mobility.

Ease of Installation

Quattro is simple to assemble, just install the cord bin and the legs, saving both time and money. Tables can be boxed individually or bulk packed to allow entire classrooms to be packaged and shipped together, minimizing carton waste.

Quality Construction

Legs mount into 12-gauge steel posts and are locked into place with a hex/tie assembly. A stiffener runs the diameter of the top to prevent sagging under the heaviest equipment. The light weight 1" thick work surface is durable and has a PVC edge attached along the entire perimeter so it won't pull out. Quattro Voltea computer tables meet or exceed ANSI/BIFMA safety and quality standards.

Warranty

Quattro Voltea computer tables are covered for 12-years against defects.

Think Green

Steel base contains an average of 30% post-consumer recycled steel and are finished in an environmentally friendly powder paint. The work surface substrate contains an average of 70% recycled content.

Made in America

Quattro Voltea computer tables are manufactured at Bretford's Chicago area factory using union labor.
