

## Multichannel Power Amps

14

*»Our home cinema experience has been enriched in a way we never thought possible.«*

DVDIGITAL

The 037 and 039 multichannel power amplifiers have achieved worldwide recognition. They give loudspeakers what they need in every conceivable situation. The unmistakable design of their heat sinks puts the finishing touch to the visual appearance of every home theatre system.

Good spatialization and the musical warmth of its sound combine favourably with the other home theatre components. The amplifier paths of the 037 3-channel device are identical to those of the 036 stereo amplifier, of the 039 6-channel amplifier, and those of the 032

and 082 integrated amplifiers. For this reason it is very easy to combine these devices. This leads to "total coherence amplification" (TCA), which, among other things, facilitates 5-channel systems by combining 037 with other stereo power amplifiers or integrated amplifiers.

### 039 MULTICHANNEL POWER AMP 5/6-CHANNEL

The 039 multichannel power amplifier is available as a 5-channel or a 6-channel version. It can continuously supply high current in a seemingly effortless manner and

can thus easily power loudspeakers with low impedance values and very complex loads. Although the 039 is a 6-channel device it can be bridged for mono operation via

an external Y bridge cable, which transforms it into a 3-channel amplifier.

### 037 MULTICHANNEL POWER AMP 3-CHANNEL

On account of its ability to keep supplying high current in a seemingly effortless manner, the 037 can power loudspeakers with low im-

pedance values and very complex loads. On account of its detailed resolution even at extremely high volumes it is, much like the 039

multichannel power amplifier, ideal for use in home cinemas.
