

Loudspeaker

18

»Full of vitality, as if it were a stage monitor in a fancy case.«

AUDIO

Since 1994 Burmester Audio-systeme has been making loudspeakers that are able to fill a listening space with an impressive sound and conjure up a three-dimensional musical experience for the listener. Instruments sound remarkably true to life and whatever the volume, the sound is always smooth and perfectly balanced.

We use bass reflex cabinets for the dynamic and uncompressed rendition of bass notes. They enhance the lower registers and at the same time minimize distortion. Column loudspeakers of the B-Series owe their slim appearance to the fact that the bass speakers are fitted into the side.

We run in every loudspeaker chassis for seven days before proceeding to the assembly stage. The parameters are measured, and the computer puts together pairs with extre-

mely close tolerance levels. Only identical stereo loudspeakers can create a perfect three-dimensional soundscape.

Typical Burmester features are the low-loss internal wiring and the stable and made-to-last connection terminals. Furthermore, all our column loudspeakers can operate with different wiring and amplifiers for the low and middle/high frequency drivers (bi-wiring and bi-amping).

Loudspeakers that appeal even to musicians

Musicians are the most critical of listeners. In their opinion, our loudspeakers literally seem to explode when large orchestras play suitably loud passages, not to mention the fact that the various instruments sound remarkably true to life.

Loudspeakers which give you all the notes

Our loudspeakers reproduce all

the audible octaves right down to the lowest bass notes. The low frequencies are the ones which convey a sense of mighty orchestral power and generate true emotion.

Loudspeakers for quiet listening

Our loudspeakers are constructed in such a way that even if you turn the volume down, the sound is always smooth, with the correct tonal balance.

Loudspeakers for loud music

Our loudspeakers enable you to listen to very loud music. However, they are still as precise as ever and never become strained.

Loudspeakers with an attractive design

The appearance of a loudspeaker should fit in with and enhance the interior design of your home. This presupposes design perfection and the use of high-quality materials.
