

Portable Speaker with Bluetooth® Wireless Technology

Audio streaming just got easier with our new portable speaker with Bluetooth technology. Compatible with both iOS and Android operating systems, the speaker's plug-and-play technology makes for connections with any Bluetooth enabled device to easily play podcasts, connect with other classrooms and schools through Skype®, Facetime® or Google+® Hangouts or stream music from Pandora® or iTunes Radio®. The 30-watt speaker easily fills a large room with wireless sound for up to 300 people.

Since the speaker enables interactive group and whole class learning, educators have a variety of options when incorporating the technology into classroom activities. The speaker includes a USB charge port and auxiliary line input to allow for expanded device compatibility.

USB Mic

Voice amplification sometimes calls for the easiest approach of using a wired mic instead of a wireless one. Our wired mics offer a variety of connections from ¼" to XLR and now USB to plug into computers. Our unidirectional mics are optimized to focus on a narrower range of speech intelligibility rather than the broader spectrum used for music.

This makes them ideal for language-oriented activities.

Increase Student Engagement with Communication, Collaboration, and Connection

Research shows that students are more engaged in their learning when they are using some form of technology. However, technology should support the curriculum and not the other way around. It is the integration of technology into the curriculum that is one of the desired outcomes of the Common Core Standards so that students learn to apply their content knowledge and skills in a global world. In order to ensure that students build the foundation they need for success, the Common Core establishes specific listening and speaking standards. Many Califone products support the English Language Arts (ELA) standards with audio technology that is classroom-tested and meets the specific frequency range to ensure speech intelligibility while protecting student hearing.

Another Common Core goal is that classrooms become more student-centric so that inquiry-based learning becomes a lifelong journey for students. In that effort, our latest audio technology supports students and teachers as they collaborate and make connections with others inside and outside the classroom. As you utilize classroom technology to ramp up the engagement of your students, you can be confident that Califone understands your needs. We salute your efforts as you guide your students from rote memorization to higher order thinking skills and eventual success in college and career.
