

## Spirit™ SD and the original Spirit™

In the Common Core Standards, student literacy is now the shared responsibility of all teachers. Specific ELA standards outline expectations and expanded requirements for increasingly complex nonfiction texts as students get older.

No matter where literacy skills are being taught, teachers can depend on the Spirit family, the leading player/recorders, to support lessons and reading practices. Teachers appreciate its dependability and flexibility in learning centers where it can be used for audio book read-alongs in independent study, small groups, differentiated instruction or whole-class learning.

The Spirit SD supports many different formats: AM/FM cassette, CD player and even USB & SD ports (1886 only). The Spirit has proven itself in the classroom and can be used for ELL/ELD language acquisition activities and foreign language instruction in addition to literacy applications. A built-in microphone records student responses and helps teachers monitor student progress. Rugged ABS plastic and recessed speakers prevent accidental damage in busy classrooms.
