

Speaking, Listening, Personalized Learning.

Discovery™

The primary reason schools choose Califone is that they depend on the speech intelligibility of our headsets for their students to achieve academic success. Engineered for heavy use, these professional-grade headsets are designed for all educational settings, making them ideal for language acquisition and STEM activities. They are also appropriate for the secure online testing requirements of the Common Core required for the next school year in 2014-2015.

The noise-cancelling microphone on the Discovery is designed for voice recognition software and is why the Discovery headset is so widely used for both language activities and game-based learning. Deep ear cups and the headband's flexible comfort sling keep students on task longer for a more robust learning experience. Changing the cord allows the same headset to be used with either monaural or stereo applications.

DS-4V 3.5mm stereo headphone plug, 3.5mm mono dynamic mic plug, replaceable 6' cord, flexible boom arm \$90

Titanium™

Achieving proficiency in the new speaking and listening standards depends on this type of high-performing audio technology. The Titanium headsets feature multiple breakthroughs in safety, performance, comfort and durability including the highest level of ambient noise-reduction available for today's students.

Built-in volume restrictions, according to the ASHA-recommended 85dB, ensure that student hearing is protected. Replaceable cords extend the lifecycle of the headsets. Some are even 100% washable (without the cords) in soap and water. Choose between single To Go™, dual 3.5mm or USB plugs
