

Wireless Listening Systems

Wireless Listening Systems Offer Flexibility and Dependability

Assistive Listening

These wireless listening systems are ideal for tour groups or students requiring additional support in language acquisition. The hip- or neck-worn 16-channel transmitter can be used with any number of matching receivers. You can also pair them together to convert your existing PA system to wireless (up to 300' range) or even upgrade outdated 700MHz PA's to comply with revised FCC guidelines.

Each 10-person system includes its own transmitter, receivers, headset microphone (if necessary), headphones, power adapters, rechargers, and a portable case.

Wired to Wireless PA Upgrade Kit

Connect the receiver to your existing wired PA and use the transmitter and headset as a wireless mic.

WS-CK1 \$496

Wireless Audio System Transmitter

Separate mic and line inputs allow you to broadcast to any size group. It also provides the flexibility for assistive listening, installed, or mobile applications.

WS-T \$175

Wireless Audio System Receiver

Protect your students' hearing with this Califone industry-first. This wireless audio system receiver integrates the ASHA-recommended 85dB volume maximum for hearing safety. The receiver has two headphone plugs, allowing multiple listeners at the same time. To upgrade a wired PA, use one of the plugs to connect to the PA for instant wireless connectivity.

WS-R \$195
