Life Safety and Security Door Hardware

Where Trust is Built™
DETEX®
Life Safety and Security Door Hardware

Detex designs for education

Today, life safety and security for students and faculty are priorities in every educational setting. Detex is meeting the challenge with products and systems designed especially for education buildings and campuses.

INCLUDED IN
HARDWARE KIT

Door hardware made for A+ reliability

More than just for main doors, Detex hardware is designed for many different door applications requiring life safety and security hardware. From main entry doors to employee entrances, from auditoriums to outdoor gated areas—everywhere that security is a priority, Detex is at work. Our hardware is engineered for dependability in critical situations and is known for no-fail performance under the most demanding circumstances.

Where trust is built

Chosen by architects, locksmiths, loss prevention managers, maintenance supervisors and contractors who need hardware that has the options they want, our hardware is easy to install and requires minimum maintenance. Industry professionals know from experience that Detex products will always work when called upon.

Life safety and security hardware for any campus application

Many of our hardware products have been developed specifically for use in schools and universities. Life safety issues must be addressed daily by educational institutions of every kind, all of which have a major concern: protecting students, teachers and staff. Access and exit control has become critical, and movement must be monitored at all exterior and interior doors, allowing them to open in an emergency or — equally important—preventing unauthorized entry. That's where Detex comes in, with the most advanced life safety and security hardware for controlled entrance and exit.

Engineered to take high use and high abuse, our hardware for schools has evolved with the help of customer input, backed by our decades of experience in the marketplace. From classroom doors to auditoriums, main entrances to side doors and service entrances, every education application is covered by our product line.

New systems designed for your specific needs

Our new systems put together all the products necessary for specific education applications, including multiple function situations. You can choose hardware that provides the level of functionality that is most efficient and effective for your needs. Once you select the exact functionality you require from one of our systems, you can be sure that they will integrate properly and work perfectly as a system. Without compromise.

Our education systems include applications for lockdown control, outdoor areas, door-propped alarms, and more. Detex system products also give you the advantage of simple installation with any hardware you already have in place, such as anti-tailgating devices, door-propped alarms, or video monitoring systems.

Advantex® quality, ValueSeries® functionality

If your school buildings are in the planning stage—or have been in use for years—we can match your needs. Choose from our premium-grade Advantex panic hardware, engineered with good-looking finishes and sleek, no-hook profiles, or our ValueSeries hardware that offers many of the same benefits as Advantex but with the option of more economical finishes. Either brand offers the durability to withstand the rigors of heavy use by students.

Central control in campus emergencies

Lockdown Systems

Locking down external doors quickly is essential when threatening situations arise on campus. Manual lockdown can take thirty to forty-five minutes or more, but with our lockdown system it happens with the push of a button in the administrative offices, saving critical minutes. Making sure that unauthorized people don't gain entry, controlling access within the building, and allowing easy exit in an emergency are all part of the lockdown process—accomplished rapidly with Detex electrified lockdown that centralizes control of all doors.

- **Lockdown System Components.**

Includes durable Advantex panic hardware with electric latch retraction or electric dogging; remote control switches (central or multiple) for immediate lockdown; and power supplies.

- **Auxiliary Security Equipment.** Door-propped alarms to alert staff of open exit doors; vandal-resistant breakaway trims; door position switches; and the ProxiPen proximity-based system for guard tour verification.

Protection for outdoor areas

Outdoor Area Systems

Exclusive to Detex, our weatherized panic hardware is ideal for outdoor student activity areas or fenced and gated areas that need to be protected from unauthorized entry while still providing emergency exit in panic conditions. Our Outdoor Area System offers Advantex quality, so it is extra durable in outside environments and has a safe, smooth surface that comes in a variety of complementary finishes. Even if your application is complex, you can order an EasyKit® with components appropriate for your needs.

- **Weatherized Panic Devices with delayed unlocking.** (where permitted by code). Sound 15-second alarm to alert playground supervisors of an attempted exit. Allow exit after delay.
- **Access Control Devices.** Allow entry into playground with key or code.
- **Weatherized Door-Propped Alarms.** Warn that outside gate is being held open.

An open and shut case for security

Door-Propped Battery Powered Alarm Systems

When school staff prop open a door to step outside for a break, they may not realize that they have created both a security hazard and an energy drain for the building. Detex Battery Powered Door-Propped Alarms are designed to alert staff with a 100-decibel alarm that can be field-set for door-open times ranging from one second to two minutes. Ideal for retrofits, the EAX-300 requires no electrical connection and is quick and easy to install.

- **Battery Powered Design.** Saves space and keeps installation costs low. Uses 9V battery.
- **Wall Mounting Kits.** With various features to meet any installation need.
- **Hard-wired systems are also available.**

Classrooms to cafeterias to courtyards—Detex handles them all

The Detex product line offers special features and functions designed for educational use wherever safety, security and ease of maintenance are paramount. Whether your order is for new construction or a retrofit of an older building, Detex life safety and security hardware can provide exactly what you need from an extensive inventory of products engineered to suit your requirements.

For interior or exterior doors, for outdoor gates, for electrified options or the simplicity of EasyKits—for any life safety and security application at your education facility, Detex has a range of solutions that will make your responsibilities easier to manage.

As panic hardware has taken on an even more critical role in academic environments, the quality that Detex brings to the job has become a deciding factor in purchasing decisions. Where life safety and security are at stake, Detex meets today's education needs without compromise.

Long life, low maintenance and repair costs

Durable and well-made, Detex products are designed to last a long time with fewer problems, and that means savings in maintenance and replacement costs. Because we constantly solicit input from our customers to ensure that our products are meeting our high standards in the field, we know that you appreciate the value of quality. Locksmiths like the ease of installation, maintenance people are pleased with the dependability, architects recognize the handsome design. They all put their trust in Detex for trouble-free performance.

When you call, our experienced customer support staff is ready to answer your questions about your specific education facility applications.
