

## C•CURE 9000 Integration with Location- Based Tracking Systems

### Benefits of Integration:

- Significantly enhances security of assets and safety of people by providing real-time location alarming
- Instantly supply critical location and identity information to first responders in emergencies
- Alarm on the position of expensive equipment, infants, patients, visitors, and other personnel through C•CURE 9000
- Associate video with events based on location of personnel or assets

C•CURE 9000 integrates with Real-Time Location Systems (RTLS) providing a cost-effective way to protect high-value assets and ensure the safety of people through location-based security.

By integrating location-based security data with the C•CURE 9000 access control and event management system, you can provide powerful protection for patients, visitors, staff and assets. An assortment of wrist bands, infant ankle bracelets, panic buttons and pendants are available to transmit location-based information back to C•CURE regarding the whereabouts of infants, patients, and employees. Add a tag to a valuable item such as a laptop, ultrasound machine, or a piece of priceless art and you can view alarms from within the C•CURE 9000 monitoring station when someone attempts to remove this item from the area or facility.

Location and alarm events detected by the RTLS system are seamlessly displayed and acknowledged on the C•CURE 9000 user interface. Personnel or assets that have moved from their intended location can trigger video pop-ups on C•CURE 9000 or trigger other alarm actions, providing the ability to more accurately and efficiently respond to security threats as they unfold.

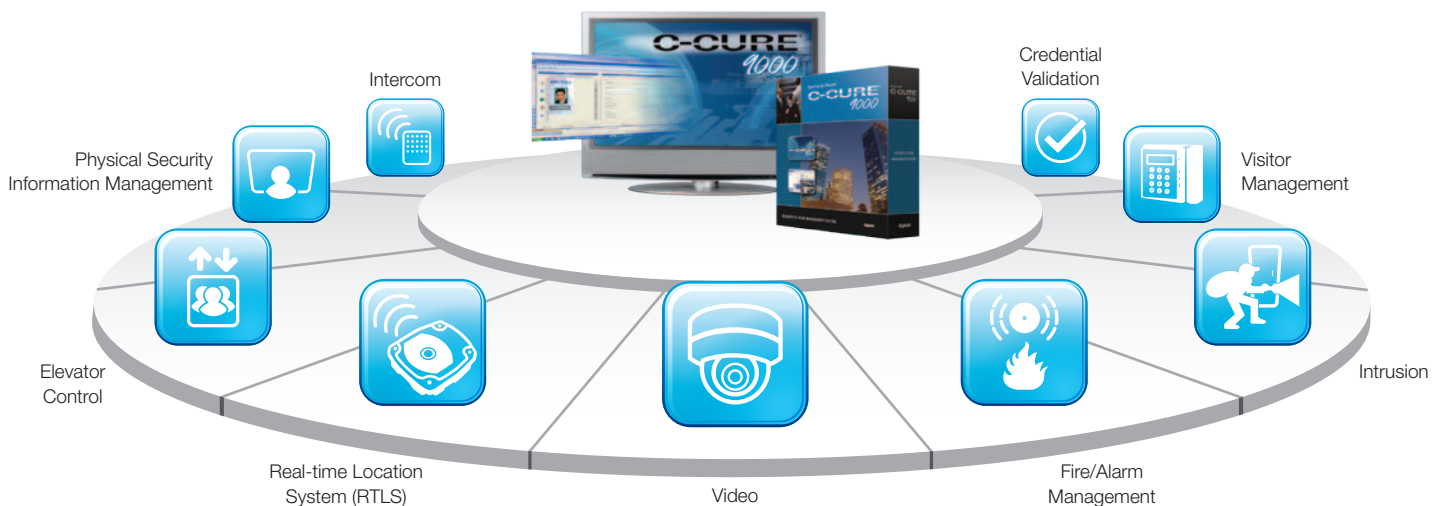

C•CURE 9000 integration with RTLS is valuable for hospitals, manufacturing facilities, museums, jails and correctional facilities or any other building or campus environment that requires real-time alarming on asset or personnel location.

## Current Real Time Location Integrations Include:

- Elpas
- GuardRFID
- AeroScout

## Industry's Most Robust Integration Program: Software House Connected

Dozens of professional developers are enrolled in the Software House Connected Program to bring you myriad integrated solutions including video, intrusion, intercom, fire alarm management, PSIMs and more. The integrations are thoroughly tested and delivered to you through the intuitive C•CURE 9000 interface. For a complete list of available integrations please visit [www.swhouse.com](http://www.swhouse.com).
