

C•CURE Solutions

Suprema Biometric Readers Integration

Features That Make a Difference:

- Simply manage one user record for both standard access control and biometric access
- Quick and easy fingerprint enrollment through BioConnect
- Flexible operating modes can be tailored to fit your security needs
- Benefit from 1:N (Finger Only) verification
- Any unit can function as an enrollment device

Biometric readers add a level of security by identifying people through unique characteristics such as a fingerprint. The demand for biometric readers has been on the rise as security professionals strive to keep employees, visitors, and property more secure without compromising user convenience. Software House partners with ENTERTECH SYSTEMS to bring you a suite of Suprema biometric readers fully integrated into C•CURE 9000 security and event management system.

The BioConnect application from ENTERTECH SYSTEMS allows for Suprema readers to seamlessly integrate into C•CURE 9000. BioConnect syncs the two systems and provides easy fingerprint enrollment and flexible operating modes, whether you are looking for a fingerprint and PIN, fingerprint and card, or any other combination of multi-factor authentication to protect your business.

The ENTERTECH SYSTEMS line of Suprema biometric readers include: BioStation T2, BioEntry W, and BioEntry Plus. These indoor and outdoor biometric solutions are durable, easy to install, and offer industry leading fingerprint recognition technology.

BioStation T2

BioStation T2 blends innovative features with sophisticated fingerprint recognition technology.

- Intuitive 5" touch screen with easy-to-use GUI
- 1:3,000 matches in one second
- Utilizes Power over Ethernet (PoE)
- Versatile interfaces including: WiFi, TCP/IP, and Wiegand
- EM and Mifare/DesFire card options

BioEntry W

Featuring a vandal-resistant structure and exceptional durability under harsh environments, BioEntry W is ideal for outdoor installations.

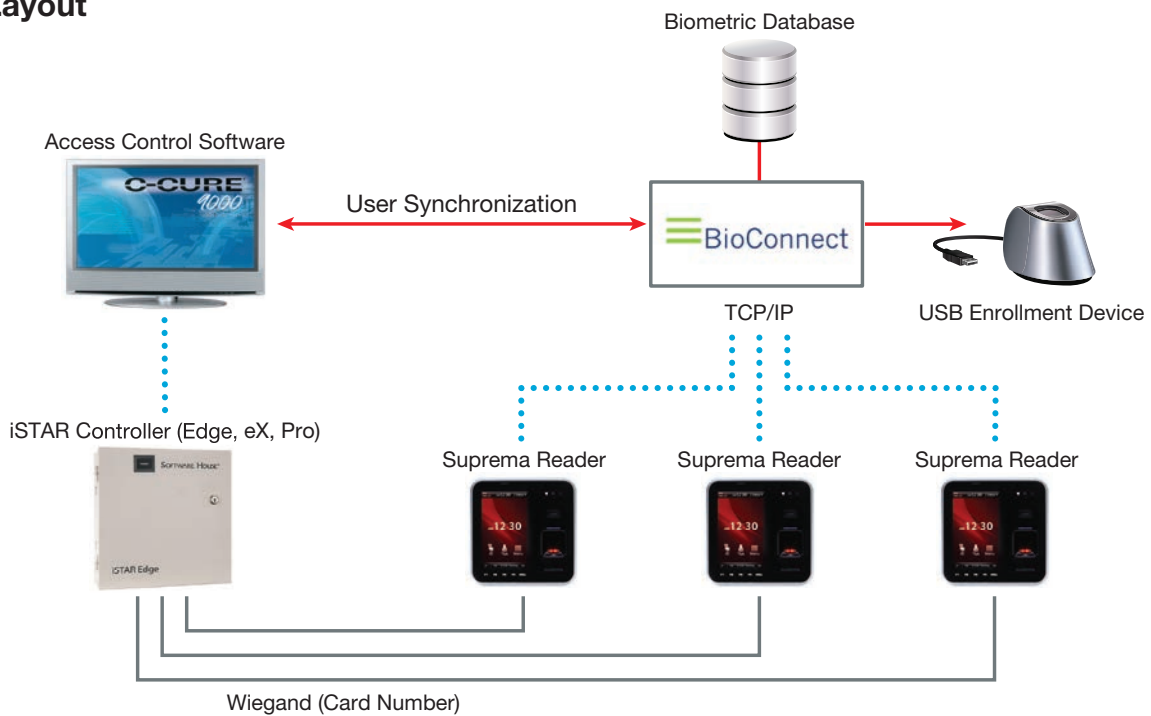

- Cutting-edge algorithm ranked top in Fingerprint Verification Competition (FVC) and Minutiae Interoperability Exchange Test (MINEX)
- Ideal for harsh environment and outdoor installation
- IK08 vandal-resistant structure constructed from heavy-duty Lexan™ resin
- 1:2,000 matches in 1 second
- Utilizes Power over Ethernet (PoE)
- Versatile interfaces including: TCP/IP, and Wiegand
- Card options include: HID Prox, Mifare/DesFire, iClass, Felica

BioEntry Plus

Integrated with both fingerprint and proximity card access, BioEntry Plus IP based fingerprint access control device covers a full range of applications from a simple standalone door control to complex networked access control systems.

- IP based fingerprint access control device
- Easy to install
- Integrated with both fingerprint and proximity card
- 1:2,000 matches in one second
- Slim and elegant mullion design for installation on a door frame
- Easy operation and management with built-in RF card reader for different user authentication modes (fingerprint and/or card) Mifare/Desfire, Prox, iClass
