for Pressure Regulating Valves

Noise Attenuation Equipment is used to reduce unwanted or excessive noise that commonly occurs in pressure reducing stations.

Series-A ORIFICE PLATE

Noise Reduction Capability: 5-10 dBA

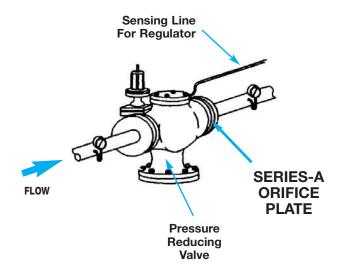

HOW IT WORKS

The Series-A Orifice Plate with its drilled orifice pattern is installed after the pressure regulating valve to smooth out turbulence caused by the pressure drop across the regulator. Noise reduction levels of 5-10 dBA can typically be achieved.

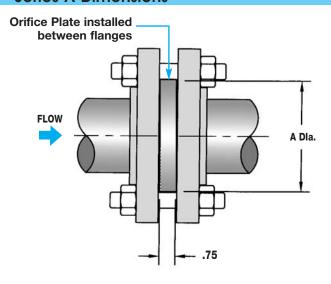

INSTALLATION

The Series-A Orifice Plate is installed between ANSI flanges immediately after the regulator. If the regulator is a flanged unit, the orifice plate is placed at the flange outlet connection.

NOISE ATTENUATORS

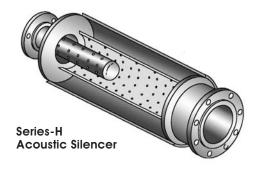

ACOUSTIC SILENCER Series-H

for Pressure Regulating Valves

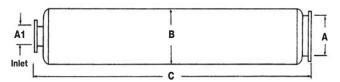

Noise Attenuation Equipment is used to reduce unwanted or excessive noise that commonly occurs in pressure reducing stations.

Series-H ACOUSTIC SILENCER

Noise Reduction Capability: 20-30 dBA

Series-H Dimensions

HOW IT WORKS

The **Series-H** Acoustic Silencer incorporates a **Dual Diffuser** tube design. The inner tube has a drilled orifice pattern and the outer tube contains an integral layer of sound absorbing insulation. Noise reduction levels of **20-30 dBA** can typically be achieved.

INSTALLATION

The **Series-H** Diffuser Tube should be installed immediately downstream of the regulator, as shown below.
