

HYBRID solutions

for commercial washrooms

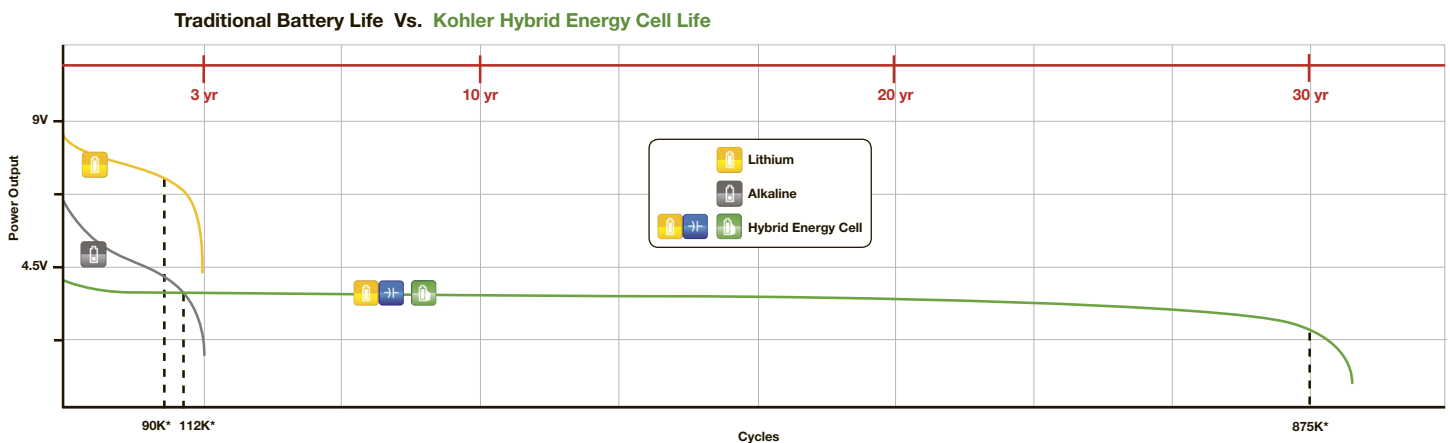

Powering 30 years of touchless performance*

THE BOLD LOOK
OF **KOHLER**

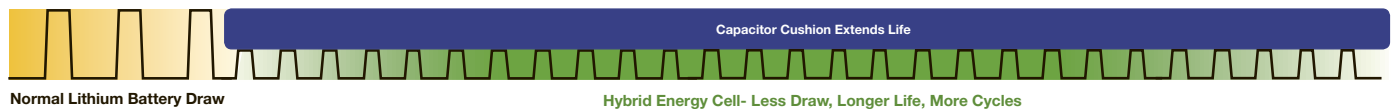

HYBRIDenergy system

KOHLER has developed a full washroom solution of long-life eco products to enhance the experience for the user, building maintenance, and building owner.

The HYBRID ENERGY SYSTEM by KOHLER® is the perfect paired solution for any application within your commercial washroom. The robust engineered full system design with low-draw sensor, integrated capacitor and long life lithium cell has set a new standard in long life/ECO solutions for plumbing products. The KOHLER Hybrid Energy System provides maintenance free power for up to 30 years.* No turbines, no photovoltaic cells, no periodic battery replacement. Just plug the battery in to the sensor and the system functions effortlessly.

Why the KOHLER Hybrid Energy Cell Lasts Longer

Innovative

The Hybrid energy system features patented internal capacitor technology that prevents high-current draws from the main battery, significantly increasing energy cell life. The system is engineered to perform with very low self-discharge and store energy significantly longer than a traditional battery.

Economical

The Hybrid energy system is quick to install and doesn't require regular battery replacement. There's no need for a direct power connection or an on-site electrician to ensure consistent performance.

Green

The Hybrid energy system is created with recyclable materials, free of mercury and heavy metals that can be harmful to humans or the environment. The long life of the power system minimizes the risk of alkaline or lithium battery disposal in landfills.

30 Years of No-Hassle Power*
Powered by a maintenance-free hybrid energy cell

*Based on accelerated cycle testing and estimated shelf life, the KOHLER Hybrid Energy System is projected to last 875,000 cycles without required maintenance. That's about one cycle every 20 minutes, 24 hours a day, 365 days a year for 30 years.

KOHLER® Innovation – KOHLER Quality

For more than 140 years, Kohler has been an innovator and leader in plumbing products. Our commitment to maintaining a single level of quality across all product and service categories ensures that every commercial product we manufacture meets or exceeds industry standards. KOHLER chrome and PVD finishes resist corrosion and tarnishing, exceeding industry durability standards by over two times.

Insight™ Touchless Faucets

- Insight sensors require only a fraction of the power compared to typical infrared sensors to function
- Sensors analyze the environment and calibrate to eliminate false actuations, optimizing faucet performance
- Solid-brass construction
- Above the deck serviceable
- Above the deck mixing capabilities

Tripoint® and WAVE Technology Flushometers

- Fit your facility with the right innovative sensing technology to meet your specific demands and a range of gpf options
- Tripoint technology features a highly accurate distance-measuring sensor that minimizes false actuations
- WAVE technology offers hygienic touchless operation on command, activating only when a hand is waved directly over the valve
- Piston valve means a more accurate flush every time and lower lifetime maintenance cost compared to diaphragms
- Other features include:
 - Self cleaning piston screen extending the service cycle
 - Mechanical manual override button for flushing capabilities even when the HES expires
 - 24-hour sentinel flush
