

Sure Seal[®] Series 100 LBV Lined Ball Valves

Features and Benefits

- ISO 5211 mounting flange allows direct mounting of actuators, eliminating costly automation hardware
- Separate lined ball and stem allows the ball to float, preventing side loading which creates stem leaks
- Standard take out dimensions allows the Series 100 valve to replace any standard ball, plug or gate valve
- Additional metal-to-metal body joint prevents possible leakage from temperature changes or line stresses - damage to the seal can not be caused by over tightening
- Series 100 valve can be used in service ranging from full vacuum up to 250 psi
- Utilizes interference between the ball and the seats, which under low-pressure, results in a tight shut-off
- Lockable hand lever comes standard, allowing user to lock valve in open or closed position
- All Sure Seal LBV Series 100 Ball Valves conform to the following specifications: ASME B16.5, ASME B16.10, ASME B16.42, ISO 5211, and MSS-SP25
