About AMAG Technology

AMAG Technology provides innovative, flexible, security solutions to the design, deployment and maintenance of stand-alone or integrated electronic security systems. We have over 40 years of proven experience as an established security management manufacturer providing access control, video and intrusion management solutions for our customers in over 100 countries around the globe.

AMAG Technology takes great pride in delivering technology expertise and superior service. In fact, we've built our company on the motto, Exceptional Customer Service and work to exemplify our motto in every customer interaction.

We work with our Symmetry Authorized Resellers, Consulting Engineers and System Users to envision, design and deploy security management systems that meet all their needs. AMAG Technology develops our products to industry standards, allowing customers to work with familiar software and user friendly hardware technologies. We excel by partnering with other technology leaders to deliver security solutions that meet all of our customer's requirements. Working from the Symmetry platform for access control, video and intrusion, our customers can integrate audio, fault tolerant servers and IP video to have a complete solution. Symmetry integrates with biometric and rugged handheld readers, providing additional levels of security or spot checking where essential to a secure environment.

When you work with us, you know you have:
- A management team with a wealth of accumulated experience ready to listen to your needs and execute a solution
- The latest technology in hardware and software
- A company with an acknowledged reputation for integrity, safety and ethics
- Global service offerings and enhanced resources as part of G4S, the world's largest security company
- A protected investment through open architecture and our backward compatibility promise
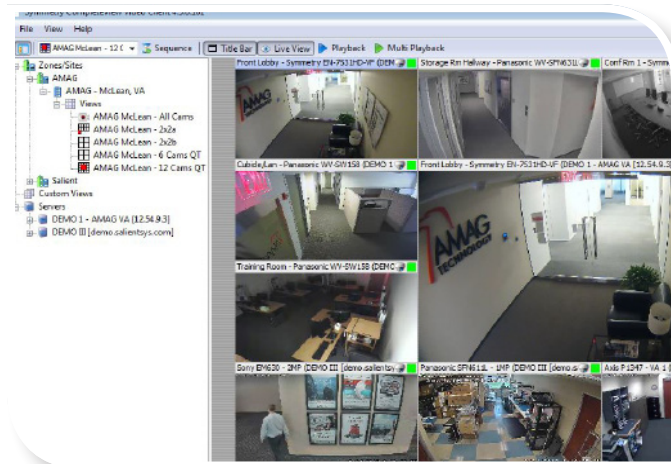

Symmetry™ Access Control Software

AMAG Technology's scope of Symmetry Security Management Systems delivers the most intelligent security integration platform offered on the market. Symmetry is the trusted choice for numerous applications in every major industry, and secures everything from a two-door building to large corporations spread across the globe. With software based on .NET architecture from Microsoft©, the Symmetry Product Portfolio easily expands with an organization regardless of how needs change. Symmetry products are FICAM approved and are on the GSA Approved Products List. Symmetry supports all leading smart card technologies and select biometric readers when advanced levels of authentication are required for USA Federal Government standards. Unlike other security management systems, Symmetry comes with a wide range of standard features such as Identity Management and Visitor Management functionality to provide a complete comprehensive solution for all our customers.

Symmetry Video

Symmetry CompleteView Video Management System

AMAG Technology has partnered with Salient Systems, Inc. to offer a straight forward, cost effective approach to video surveillance. Symmetry CompleteView Video Management System protects a user's investment in analog infrastructure as they implement new IP cameras and adopt new technologies. Available in four editions, Symmetry CompleteView provides the tools for unlimited scalability and flexibility to manage large and small security needs. No fees are charged when a user upgrades from an existing analog system to new digital video technology. Simply check a box and the license changes from analog to digital.

Symmetry CompleteView Video Managemnet System includes a suite of software tools called Dynamic Video Management. Dynamic Resolution Scaling sizes the video stream to match the display size of the viewing client (monitor, tablet or phone) reducing bandwidth consumption. Dynamic Video Decoding saves CPU usage by controlling server processing for camera streams based on live viewing or server motion detection settings. Dynamic Frame Throttling allows the server to monitor camera video queues balancing load and latency without affecting recorded video.

Symmetry PowerProtect NVRs

The full line of Symmetry PowerProtect NVRs support analog cameras as well as IP cameras simultaneously using Symmetry CompleteView Video Management System software. Users can upgrade to IP at their own pace without repurchasing camera software licenses. The NVRs come in a variety of chassis sizes, memory capacities and storage options, allowing users to select the best NVR for their needs.

Symmetry TouchView Mobile Apps

Users can view video on their tablet or phone using Symmetry TouchView Mobile Apps. Dynamic Resolution Scaling delivers the perfect sized video stream from camera to device, saving bandwidth while providing the best image size for fast video call up. The powerful cross platform allows users to create configurations in the app and transfer them to the Web client. Users can also export web client configurations and import them into their iOS or Android mobile device.

Integrated Security Management

Symmetry brings together Identity Management, Access Control, Alarm Management, Video Management and Situational Awareness into a single software application. Symmetry will grow and adapt with your organization over time. The software is incredibly easy to learn and use, and contains a huge number of productivity and security features. Video and many other security equipment integrations can be added to the Access Control system over time without any disruption.

Symmetry can scale all the way up to a global integrated security solution for the world's largest organizations. With robust add on modules like Threat Level Manager, Symmetry can protect an entire campus instantly. Change security posture at a facility, department or agency-wide with one or two mouse clicks. TLM institutes a rapid change in security levels, creating a lockdown scenario if the situation demands it.

Workflow Designer allows security managers to institute a systematic process for security officers to follow when an alarm occurs. The process ensures consistent responses to alarms to reduce errors and increase efficiency and response time.

The Symmetry range of intelligent controllers includes a PoE IP centric solution that provides distributed intelligence at the door and is automatically configured, to a powerful eight-16 door solution that supports connections for a client PC via a local network, hardwired communications port or remote dial-up modem. Additional controllers are easily added when more doors require security.

Symmetry CONNECT™ is a policy-based software platform for enterprise class applications that merges all your technologies together for better situational awareness and visitor management. Centralize your systems and automate process inside your organization so that you can better secure your facility, people and assets while meeting industry specific regulations and compliance requirements.

Symmetry HD cameras include built-in advanced motion detection. The complete range comes with optional video analytics to provide a higher level of security. Symmetry cameras come in a variety of options and are a cost effective solution when paired with a Symmetry Security Management System.

Integration tools such as the XML Developer's Kit allow the user to exchange data freely between business information systems. XML provides a means to develop and interface to programs such as Human Resources or cash management that can control and exchange information with the Symmetry Security Management System, Symmetry VMS, Symmetry hardware or integrated third party systems.

Seamless Integration

We understand that our customers may need technology solutions that go beyond the scope of our Symmetry Product Portfolio, yet work congruously together. The many facets of security demand it. To accommodate, AMAG Technology has developed integrations with several elite technology partners so our customers can deploy security solutions that meet all of their criteria. Our customers can take advantage of the Symmetry platform and add NEC fault tolerant solutions, Stentofon IP audio capabilities, or DMP intrusion options. For a complete list of elite technology partners, visit www.amag.com.

# People Transcending Technology

Pre and Post-Sales Support

AMAG Technology's Business Development Team and Regional Sales Managers work closely with our Symmetry Authorized Resellers to give them every advantage to win the job. Our highly skilled security professionals continuously educate our customers about our dynamic product portfolio ensuring its capabilities are utilized to their fullest potential. We make every effort to ensure that our system users understand all facets of the Symmetry Product Portfolio and what sets AMAG Technology apart so customers can make informed decisions about their security investments.

AMAG Technology's Sales Engineering Department provides pre- and post- engineering support to system users who require additional support. Our team of highly qualified engineers provides expert-level support any time throughout the life of your security system. Our quick and easy sales engineer hotline makes getting in touch with them effortless.

Symmetry Authorized Resellers

AMAG tackles the market through the reseller channel. Symmetry Authorized Resellers reside in every major market around the globe. Factory trained and certified, Symmetry Authorized Resellers are among the most adept security integrators in the industry. Experts on the Symmetry Product Portfolio, they guarantee Exceptional Customer Service and the highest level of technical proficiency. Symmetry Authorized Resellers collaborate with our Regional Sales Managers, Sales Engineers and Professional Services teams to ensure the job is won and implemented to the customer's satisfaction.

Training

AMAG Technology offers product training for Symmetry Authorized Resellers and system users at its Training and Technology Centers across the USA, UK and Middle East. Convenient online recertification courses are available for technicians who need to keep their certifications up-to-date. On-site training is available when criteria are met.

Professional Services

AMAG Technology understands the challenges of securing a building, campus or multinational company. Our Professional Services team works closely with Symmetry Authorized Resellers and end users to maximize the end user's investment and ensure all Symmetry's benefits are utilized to their maximum capacity. This operation-focused attitude enacts a teamwork approach to every project. Our Professional Services team is available to provide a second layer of support if a project demands it.

Technical Services

AMAG Technology's Technical Services Division is employed by professional experts who endeavor to provide positive technical support encounters with all customers. While standard support is available through Symmetry Authorized Resellers, with an updated Site Support Agreement AMAG Technology's Technical Support experts are standing by around the clock ready to assist you when needed.
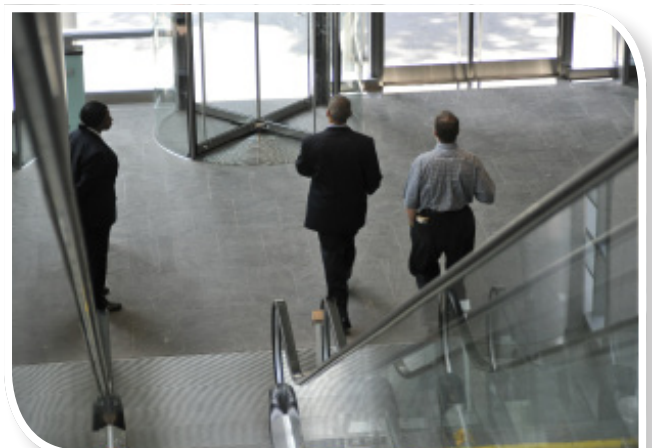

AMAG Technology's Mission

AMAG Technology's mission is to provide superior security management solutions for organizations to protect their people, assets and buildings.

AMAG Technology will achieve its mission by providing Exceptional Customer Service to every customer interaction. Our employees are dedicated to contributing to your success and will perform beyond expectation to ensure you are satisfied with your results and technology solution.

AMAG Technology develops its security technology in-house, therefore offering customers a direct communication line to the input of further development. The Symmetry Product Portfolio is designed to work together and can expand and grow as the customer evolves. Our backward compatibility promise ensures your system will always operate flawlessly as technology advances.

USA Government Solutions

More than 20 years of experience working closely with numerous Government departments and agencies has proven AMAG Technology an expert in working with the US Government. AMAG's Symmetry products are FICAM Approved and GSA Listed providing federal government solutions as a trusted partner for years. From early development of the Navy's MARC Program to ground breaking smart card readers capable of reading PIV II cards required by FIPS 201, we have been involved since the beginning and understand the stringent directives and standards initiated by the government.

AMAG Technology employs a team of dedicated experts that are part of our Government Systems Group. Our dedicated Government Systems Group is full of experts that have the depth of knowledge to help you navigate complicated requirements and determine which compliant solutions will effectively secure your people, property, data and assets. You can rest easy knowing your security solution complies and meets the highest standards. Our Government Systems Group is actively involved in several smart card, government and security groups that influence Government standards decision makers. Our experts communicate the critical knowledge revealed early on with our Symmetry Development Team to manufacture security solutions that are poised to meet tomorrow's requirements. AMAG Technology performs its due diligence to ensure your security solution will be effective for years to come. AMAG Technology is the government expert.

G4S Experience

AMAG Technology is a G4S company that delivers access control, video management and policy-based software solutions to companies of all sizes and in every market. G4S secures your people, property and assets by providing unified solutions that focus on mitigating security risk while reducing the total cost of security. This risk-based approach encompasses a comprehensive suite of security products and services including risk consulting and investigations, security officers, systems integration, and security software and technology.

Each G4S service is market leading on its own. When we combine our offerings, we can address our customer's specific challenges and combine our offerings to deliver a comprehensive customer experience.
