REFUGEES CENSUS

Plug & Play Identity Management

Identity management projects can be large scale undertakings. The management of time and budgets is a major challenge both in the public and private sectors. When it comes to issuing reliable identity documents, data quality and security are obviously top priorities. This data simply cannot be compromised. Why? Because an identity document must prove, beyond any doubt, the authenticity and uniqueness of the holder's identity. A trusted identity is the basis for the granting of rights, privileges and services.

MorphoCivis Appliance is Safran Identity & Security's latest turnkey solution for delivering reliable cards in both the public and private sectors. Configured for small populations and/or projects, it ensures the integrity of critical operations like first issuance and renewal. This off-the-shelf solution will meet the most stringent reactivity, convenience and cost control requirements.

KEY BENEFITS

Trusted identity: MorphoCivis Appliance embeds Safran's state-of-the-art biometric technologies. This ensures the strongest defense against appropriation of identity, use of false identity, identity theft and impersonation.

End-to-End: MorphoCivis Appliance manages the whole ID management process, from applicant registration to ID card life cycle management. It ensures that governments and private institutions deliver trusted identities, conveniently and reliably.

Responsiveness: as an off-the-shelf solution, MorphoCivis Appliance offers the shortest lead time (typically 4 months).

Low cost of ownership: by design, the solution closely controls the costs of operation, administration and maintenance.

Scalability: easy to upgrade, MorphoCivis Appliance can readily be extended to provide a larger system. Typically, this would use MorphoCivis Suite, Safran's comprehensive ID management solution.

Plug & Play

Commissioning an ID project is simple and rapid with MorphoCivis Appliance. It is a one-stop, plug-and-play answer to convenient, efficient delivery of secure identities.

No specific skills are required to operate the system. We deliver MorphoCivis Appliance as a fully integrated solution, ready installed and configured for your use in-house.

For your project, MorphoCivis Appliance comes with:

- MorphoTablet™ 2: an intuitive, tactile device that brings convenience and time saving to applicant registration and ID issuance. MorphoTablet offers the perfect platform for mobility, versatility and data security. It will operate anytime, anywhere
- A centralized back-end system for application processing and ID life cycle management
- A desktop personalization machine
- A batch of blank cards, ready to personalize

APPLICANT REGISTRATION & CARD ISSUANCE

Applicant registration

Card issuance

APPLICATION PROCESSING

Biometric deduplication

Eligibility verification

Investigation of suspicious cases

Identity and card lifecycle management

CARD PERSONALIZATION

KEY FEATURES

- Mobile registration and issuance, anytime anywhere
- A new, streamlined approach to registration and issuance services, for greatly enhanced usability
- Multi-language GUI: English, French, Spanish and Portuguese
- Close control of operational costs: the simplified, integrated back-end architecture and card personalization operate from a single host
- Secure ID cards, compliant with Safran's IDEal Citiz range of ID cards. IDEal Citiz is a Java Card OS with an Identification, Authentication and Signature applet. It is certified to Common Criteria EAL5+ and can include PVC contact or dual interface with match-on-card and color or black & white personalization
- Safran Identity & Security's biometrics embedded into the system: ranked # 1 in NIST evaluations
- Hardened operating environment: access control, secured communication
- Comprehensive traceability through audit trail
- Integrated reports on all operations
