## Installation Instruction Quick Summary:

<ul style="list-style-type: none"><li>Place the meter between the piping flanges, set in the desired position, taking care not to damage it.</li></ul>	
<ul style="list-style-type: none"><li>Fit the gaskets in between the pipe ends and the meter. Insert bolts, attach nuts, and tighten slightly. Make sure meter centerline aligns with the pipe and the display is not askew.</li></ul>	
<ul style="list-style-type: none"><li>Check meter centerline again, and then tighten the nuts diagonally in the order shown in the figure to the right. Tighten the nuts to squeeze the gasket until fully sealed.</li></ul>	
<ul style="list-style-type: none"><li>When tightening the flange connection, be sure to tighten in a balanced fashion so that the companion flange face and the tube extension meet flush around the entire face. Do not over tighten the flange bolts. A torque value between 60 and 65 lb*ft (81 – 88 Nm) is recommended.</li></ul>	

Optional Accessory: If applicable follow instructions for mounting the remote display or output module onto the meter:

Do not hold the center of the retaining clip when inserting or removing it. Hold both ends and slowly insert or remove it. Ensure that the lugs on the clip ends are pointed upward. Ensure the optical port is not blocked by foreign substances.

## Disposal Instructions:

Do not cut, disassemble, transform, heat, or burn when disposing of the products. Follow local, state, and federal regulations for disposal and handling of lithium containing electronic devices. Take special care to avoid damage to the batteries when disposing of the products to avoid ignition or explosion.
