

CUSTOMIZED CONTROLS FOR THE ENVIRONMENT

LARGE ENOUGH TO OFFER GLOBAL EXPERIENCE...
AND SMALL ENOUGH TO PROVIDE LOCAL SERVICE AND SUPPORT

- 35 years of experience designing and building energy-efficient systems that increase rotating equipment reliability
- Customization for any application utilizing touchscreens, heavy duty floats, level transducers and/or probes
- Supply standard simplex and duplex controls, as well as customized solutions
- UL 508A and UL 698A

G&G **CONTROLS**

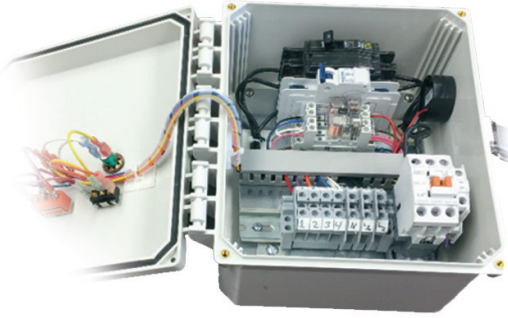

A Division of Stancor, L.P.

DEWATERING | ENVIRONMENTAL | MUNICIPAL | RESIDENTIAL

PRODUCTS

SIMPLEX

G&G Controls standard Simplex pump controls provide the base for additional customization. Simplex controls add automation to functionality associated with a single pump.

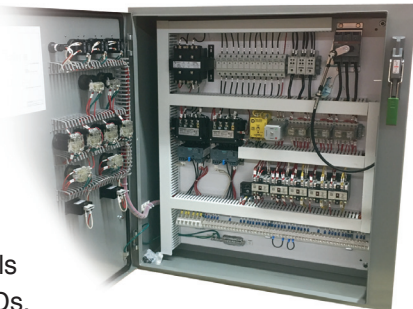

DUPLEX

Duplex controls allow alternation between dual pumps in residential, sewage and de-watering applications. Coordinating multiple operations protects against fluctuations in water levels.

CUSTOMIZED

Pumping systems have to control several variables to maximize performance. Customized controls can implement VFDs, booster pumps and transducers for maximum system efficiency.

APPLICATIONS

Controls are needed in a broad range of applications that feature rotating equipment. Historically, G&G Controls has helped ensure liquids are managed effectively—delivering the right amount with optimal pressure and managing process parameters.

G&G Controls has experience maximizing system performance in the following applications—avoiding costly downtime, maximizing product life and lowering energy costs.

DEWATERING
