

Serial Interface CardSlides

Two Types of SmartCard CardSlides that are Designed for Card Ready Machines

The Serial Interface CardSlide was designed specifically to communicate with a washer or dryer that have controls constructed to operate at a higher level protocol. The reader does not have a display. Instead, it uses the built-in display on the machine. In a prepped for card machine, the reader is kept secure because it is mounted internally with only the card guide exposed.

ESD also manufactures a Blue Face Serial CardSlide, which functions like the Serial Interface CardSlide, but is designed to fit into the coin drop or money box opening on a coin or prepped for coin machine, similar to a Ruby CardSlide.

The Serial Interface CardSlide will read the smart chip on an inserted SmartCard and validate the site code. It will then read the balance on the card and if sufficient funds are available, it will communicate with the control to start the washer or dryer while deducting the cost from the remaining balance on the card.

Serial Interface Smart Card Readers -11-000-XXX

SmartCard Serial Reader Benefits:

- ✓ **Durable Construction**
- ✓ **Plug and Play Interface**
- ✓ **No Moving Parts**
- ✓ **Stand Alone Operation**
- ✓ **Specific Readers Available for All Serial Interface Machines**
