

PresentationPro™

PA329
shown

Includes magnetic volume/mute remote

WIRELESS

Portable or installed, solo or used with other speakers - the 30W PresentationPro can handle it all. It's the ideal companion for wired or wireless voice & audio amplification for mobile presenters in auditoriums, hotels, conference rooms and even for outdoor uses.

Long recognized as the most spec'd speaker by schools and districts because of its power and durability, the upgraded and easy-to-use PA is also the first PA designed to connect with mobile devices. Just connect your device to the PresentationPro with the same type of 3.5mm plug used when you listen to music with headphones.

A single PresentationPro is loud enough to be heard by up to 350 people. It has multiple ports for easy voice and audio amplification from computers and other sources. The redesigned PresentationPro uses the heaviest magnet in its speaker class - projecting the richest and biggest possible sound. It has a volume / mute remote control which magnetically connects to the speaker when you're not using it so it won't get lost - another industry first. Includes volume/mute remote.
