Multi-Parameter Kits

Hach's multi-parameter kits test for the parameters you need - no more, no less. Each kit comes complete with reagents, instructions, and a rugged Hach carrying case. Kits range from a few essential parameters (chlorine & pH) to many for a specific application, such as the Soil and Irrigation Water Test Kit (SIW-1).

Multi-parameter kits use several of Hach's platforms, such as the digital titrator, color disc, drop count titration and test strip platforms for simplicity and accuracy. Applications include drinking water, soil testing, water quality, boiler water, education, ecology, surface water, stream survey, and more.
