No Problems.

Linear Bar

Extruded Aluminum

Smooth Front

Standard

ADA

Frequently the bane of architects and decorators, the vertical stack fan coil stamped grille can now be replaced by three exciting options. Attractive and stylish make plain and ordinary a thing of the past. Forget about having to tolerate a scratched, deteriorating access panel, not to mention trying to find the right tool to remove it!

The superior option is unquestionably the linear bar grille return/access panel with separate frame and matching supply grille. This striking combination offers an outstanding presentation unmatched by anything else on the market.

A step above the traditional look is filled out by an extruded aluminum return/access grille, with a separate frame. This option is paired with a double deflection aluminum supply grille incorporating a matching, attached beveled frame. Clearly exceeding the norm, end users will have an aesthetically pleasing, yet very practical unit which will augment any décor.

Rounding out the line is a smooth front panel designed to allow return air to enter underneath all four exterior edges for different presentations such as matching wall-paper covering.

The standard stamped return panel anchors the product category. Made of 18 gauge, galvanealed steel with powder coated, polyester paint, it has withstood the test of time and acceptability. Coupled with an aluminum, double deflection supply grille, this combination will serve a multitude of functions at a high level of performance. In addition, the standard grille comes with an adjustable, hanger bracket which will accommodate sheetrock applications of 1/2" to 1 1/4".

To meet the growing requirements of the senior population, an ADA panel has been added which meets all the standards of the Americans with Disabilities Act.

When you are looking for the very best there is only one obvious choice – Titus!
