

A370.2 Power Amplifier

[Print This Page](#)

OVERVIEW

With its carefully thought-out, low feedback circuit, the A370.2 approaches the ideal in mosfet power amp design.

As befits an amplifier of this stature, its electronic components are among the best, with many manufactured specially for Musical Fidelity.

The front end design is based upon that of the SA470. The power supply is massive, +/-50,000 microFarads per channel (+/- 100,000 total), with a 600 watt transformer for each channel.

To this, the A370.2 adds the sonic clarity of Class A, with some 98% of music in the Class A operating range. As a result, the sound is valve-like with notable refinement, power and control.

FEATURES & BENEFITS

SPECIFICATIONS

Power output per channel at 8 Ohms, <1%THD 150 watts

Sensitivity 750mV
