

ABS

Cabinet Air Bag Sleever

The ABS Air Bag Sleever produces top quality fully pressed sleeves of all sizes and shapes in one operation. Contoured chests, non-porous air bags and automatic measuring ensure high quality uniformly finished sleeves. The non-porous air bags are inflated with compressed air and act as malleable expander blades, which expand to the contour of a wide range of shirt sleeves. The pressurized air bags fit precisely into the highly polished contoured chests, pressing the length of the sleeve from shoulder seam to the cuff.

Automatic cuff clamps release at the completion of the timed cycle and coupled with easy loading ensure that high production is obtained with very little operator effort.

The ABS is very smooth and quiet in operation and uses very little electricity. Its durable construction will give years of trouble free service.

Specifications

Features

- **Low capital cost**
- **Contoured chests**
- **Measuring Arm**
- **Microprocessor controls**
- **Automatic cuff clamp release**
- **Quiet operation**
- **Non-porous air bags**
- **Widest range of shirt sizes**
- **Easy to dress**
- **minimum of floor space**
- **Durable construction**
- **Fast smooth action**
