

# Custom Cart Dumping Systems

## *Custom Dumper*

Ameri-Kart material handling systems (carts and hydraulic dumpers) are designed to meet the needs of most industrial applications. Where containers are non-standard and do not have latch bars or lift fittings, custom dumpers can be designed to securely hold containers during dumping cycle. Custom designs address the special needs of non-typical cart configurations, load specifications, and motor or electrical power requirements not available in standard models.
