Non-Penetrating Roof Mount

Satellite Dish Mount

- Mounts a DBS satellite dish safely and securely on a rooftop
- Eliminates the need for fasteners that would penetrate the roof
- Ensures smooth and fast satellite antenna mounting, particularly on flat roofs
- Sturdy steel construction
- Accepts standard-size concrete building blocks as anchors
- Ideal for dish antennas up to 24 inches (60cm) wide with metal foot mounts
- Foot-mounting bolts, nuts and washers are included

221-110

Product Description

Steren's non-penetrating roof mount ensures smooth and fast satellite antenna mounting, particularly on flat roofs. Perfect for temporary or permanent installations, it is designed for mounting a DBS satellite dish atop a building without the use of fasteners that would penetrate the roof. The mount is constructed of steel and accommodates standard-size concrete blocks as anchors, providing a strong foundation for the DBS dish antenna. Mounting bolts, nuts and washers are included for fast installation.
