

Vantage point is everything when it comes to surveillance. Patrolling an area on foot provides intelligence and deterrence, but requires increased personnel levels. Surveillance cameras and imagers offer partial solutions, but certain situations require a person's ability to think on their feet and provide first hand assessment and response. Through simple elevation an officer is provided greater field of view and increased assessment capabilities.

Sky Watch provides the manned or unmanned surveillance and deterrence capability necessary to any security solution in a highly mobile, elevated unit. These towers rise to a two story height and provide a platform for innovative surveillance solutions in addition to the personal input a man "on the ground" provides. The Sky Watch family of stand alone, mobile surveillance towers can be specifically tailored to meet customer requirements. From the basic Eagle to the added height and adaptability of the Sentinel or the optional ballistic capabilities of Frontier, Sky Watch provides a powerful deterrent and true force multiplication capability.

Manned, these units provide a 360° view providing the ability to cover an area previously requiring three or more officers on foot. Unmanned, Sky Watch provides an ideal platform on which to mount various electro-optic and other types of sensors for continuous surveillance adding to the persuasive deterrent a high profile presence affords. All Sky Watch units

## DETECT ASSESS RESPOND

can be outfitted to provide full command and control capabilities for fluid operations whether on the front lines of homeland security or at hometown events.

Sky Watch has provided mobile security solutions for military, police and security officials in the U.S. and around the world, including such high profile geo-political forums as the G-8 Summit and the U.N. Sky Watch provides the flexibility for a rapid and feasible response to any security situation as it arises.

*The power, the height and  
the mobility for surveillance solutions.*

Sky Watch units provide a high level platform for an array of surveillance options. Every tower includes the basics for the comfort and safety of the officer inside through adjustable heat and air conditioning, tinted sliding glass windows, comfortable seating, a fold away table and basic first aid kit. And no matter the application, only one man is required to set up and deploy a unit.

Sky Watch can easily be relocated and is rugged enough to handle even the most primitive off-road conditions. And all models are adaptable for cameras, radios, public address systems and other equipment integration.

Now, one officer can cover an area previously requiring three or more personnel.

## STANDARD FEATURES

- Totally self-sustained
- Heating and air conditioning
- Customized surveillance equipment integration
- Tinted windows
- Solar panel for increased energy output
- Control console with weatherproof switch panel
- Roof-mounted flood lights
- Two 110V GFI outlets
- One 12V outlet
- Fail safe hydraulic system with electric and manual ascent and descent controls
- Wind speed meter
- Generator or shore power options

## APPLICATIONS

- Force Protection
- Port Security
- Consequence management
- Disaster response
- Crowd management and control
- Flight line protection and surveillance
- Parking lot surveillance and traffic management
