DVD-S661 HDMI DVD Player

High Picture/Sound Quality

HDMI Digital Interface

The HDMI interface delivers high-definition digital video and audio completely free from noise via a single cable so viewers can enjoy the best possible video and audio performance. HDMI output with upscaling to 1080i/720p maximizes the resolution of video data from DVDs to best match HDMI compatible monitors.

Direct Playback of MP3/WMA/DivX® and JPEG Files from USB Devices

A USB interface on the front panel lets you plug in USB MP3 and WMA players as well as USB memory devices (like flash drives and portable HDDs) for convenient access to your favourite stored music and images.

Progressive Scanning (NTSC/PAL)

Progressive scanning provides maximum resolution for a smoother, filmlike image when viewed on a high definition TV or large screen. This DVD player offers progressive scanning of both NTSC and PAL signals.

HD JPEG Picture Playback

The DVD-S661 also provides High-Definition JPEG picture playback, allowing the enjoyment of unsurpassed JPEG pictures at its native resolution via HDMI 1080i or 720p video signals with maximum quality and detail.

Advanced Features

DivX® Ultra Certified

This DVD player can play all versions of DivX® video (including DivX 6®), and provide enhanced playback of advanced media features like interactive menus, subtitles, and alternate audio tracks supported by the DivX® Media Format.

Enjoy MP3 Music and JPEG Pictures Simultaneously

Load a disc or plug in a USB device that contains both MP3 music and JPEG picture data and the disc menu will appear on the TV monitor. Select and MP3 music track, then also select a JPEG picture file and you can watch the pictures on the screen while the music plays.

MP3, JPEG, DivX® and WMA Playback

Users can discs recorded in the MP3 (audio), JPEG (images), DivX® (video) and WMA (audio) formats.

Wide Disc Compatibility

This versatile unit is designed to play almost any kind of DVD and CD format/disc, including: DVD-Video, Audio CD, Video CD (VCD), Super Video CD (SVCD), DVD-R, DVD-R DL, DVD-RW, DVD-RW VR with CPRM, DVD+R, DVD+R DL, DVD+RW and CD-R/RW.

Easy Operation with GUI (Graphical User Interface)

This player makes operation extremely simple by displaying a variety of clearly understandable GUI menus right on the TV or monitor screen. It's easy to select and adjust any desired function with the remote control.

View Picture CDs

Users can view CDs with pictures, both Picture CD and JPEG types. Convenient functions make it easy to zoom, rotate, flip and scan the pictures.

Multiple Zoom

The Multiple Zoom function lets you vary the size of the image in six steps: 1/4, 1/3, 1/2, 2x, 3x and 4x.

Widescreen Modes for HDMI

Two modes can be selected for optimum viewing on widescreen monitors via HDMI: Superwide and Pillar Box. Superwide helps minimize distortion with a 4:3 picture by trimming the top and bottom to make it closer to 16:9 (except with 480p/576p resolution).

Perfect Match for Yamaha AV Receivers

In addition to having a similar appearance, the DVD-S661 is designed for easy operation with Yamaha AV receivers that have the SCENE, such as the DSP-AX761. A Remote Power On function can be used by connecting the Remote Input of the DVD-S661 to the Remote Output of the DSP-AX761. Playback of an inserted DVD can be started simply by pushing the SCENE button on the receiver.

SCENE

Other Notable Features

- 108MHz/12-bit video DAC
- 192kHz/24-bit audio DAC
- Lip synchronization
- Night mode
- Sleep timer
- 3-step dimmer
- Screen saver
