

Safety Illumination Device (S.I.D.)

Fits All Major Brands of Fire Helmets

The new S.I.D. is a distinct helmet mounted illumination device designed specifically for emergency workers. S.I.D.'s unique illumination can be seen from long distances in low visibility conditions or complete darkness (haze, fog, or smoke). S.I.D. will withstand extreme heat, inclement weather conditions, and is impact-resistant. Use S.I.D. as a personal alert safety system or emergency lighting. S.I.D.'s components are designed to satisfy industry standards.

Additional Uses:

- ▶ Confined space rescue
- ▶ Roadway/highway motor vehicle collisions
- ▶ The parking of fire apparatus; stopping traffic

Be seen in low visibility conditions

BD140 Safety Illumination Device \$39.95

Fireground Compass®

Quickly and Easily Navigate Your Way to Safety

The Fireground Compass® is a lightweight, easy-to-use tool that combines a compass with rotating bezels. It has a "building bezel" with four points labeled A-B-C-D, corresponding to firefighters' current labeling system for each side of a building. First, the compass is oriented to north. Then, the bezel rotates to reference the A-B-C-D sides of the building. Together, the compass and rotating bezel combine to give users a common reference point. A separate, "command bezel" helps indicate where the command post or point of entry is located relative to the building. The durable and heat-resistant compass is illuminated by LED lights, making it easy to read in dark or smoke-filled environments. The compass is sized specifically to be used with gloved hands, allowing firefighters to easily and quickly orient the compass. *Ship. wt. 2 lbs.*

BH004 Fireground Compass® \$98.95
