Liebert TYPE SS Transient Voltage Surge Suppression

MOV/SAD Current Sharing – Type 1 Model

The Liebert Answer:

The Liebert TYPE SS Type I Model offers a true, coordinated multi-stage system of suppression. It integrates the fast response time of the silicon avalanche diode (SAD) with the high-energy capability of the metal oxide varistor (MOV) for increased reliability and performance. This unique circuitry does not sacrifice the sensitive SAD module when subjected to a damaging high-energy transient event.
