

# 7" Table Top Touch Screen Control4® Suite Systems

*Easily navigate the Touch Screen to control AV, room temperature, curtains, lighting, timers, green settings and request guest services.*

Versatility and ease of use are at your fingertips with the Control4® 7" Table Top Touch Screen. This brightly-lit, easy-to-read Touch Screen provides control over many aspects of your hotel's guest rooms. By the time your guest arrives and checks in, you can have the room already set up just the way they like it. Adjust the room's temperature for energy efficiency and choose your guest's favorite lighting scene (lower the light settings to save energy); set the Playlist to your guest's favorite album (through the on-demand music, iPod or server-based music files); or send messages to your guest through this single, elegant interface. Your guests will be flattered at the level of service your hotel provides, and you'll reduce operational costs for lighting, heating and labor, utilizing the Control4® revolutionary 'Green' features for the guest room. And after they've settled in, your guests can adjust easily any aspect of their room to make their room's environment more comfortable.

The Touch Screen can be used over Ethernet or WiFi to give your IT department more communication choices, and includes a proximity motion sensor that wakes up the Touch Screen whenever your guest approaches it.

Retrofitting is a snap. Because the 7" Table Top Touch Screen sits on a nightstand or a desk, poking holes in the wall to rewire the room for automation is simply not an option. The Touch Screen sets a new standard in Touch-Screen technology with rich high-definition color graphics, an easy-to-navigate interface and superior performance for the ultimate guest experience; and it adapts well to hotel rooms of any size.
