# Red Top® Gauging Plaster

**Mixes smoothly and easily with lime to produce smooth-trowel and sand-float interior surfaces that resist cracking**
- Provides smooth-trowel or sand-float lime-putty finishes for normal interior walls and ceilings.
- Produces hard, crack and abrasion-resistant surfaces.
- Quick-Set and Slow-Set formulations are unaggregated for use over sanded basecoats. Perlite Aggregate formulation features perlite fines for use over lightweight aggregated basecoats.

## Description
Red Top® Brand Gauging Plaster is a gray to white plaster (depending on gypsum rock source) that provides smooth-trowel and sand-float lime-putty finishes for normal interior walls and ceilings. Quick-Set and Slow-Set formulations are unaggregated for use over sanded basecoats. Perlite Aggregate formulation includes mill-mixed fine aggregates for use over lightweight basecoats. Produces hard, crack- and abrasion-resistant surfaces over gypsum basecoats. Quick-Set formulation sets in 30-40 minutes; Slow-Set formulation sets in 50-75 minutes.

## Limitations
1. A smooth trowel finish should not be used over lightweight aggregate gypsum basecoat applied over metal lath. A sand float finish is recommended.
2. Where the gypsum basecoat is STRUCTO-Lite® Brand Basecoat or contains lightweight aggregate (perlite or vermiculite) over any plaster base except metal lath, and when a smooth trowel finish is used, the finish coat should be Red Top Gauging Plaster and lime with the addition of 1/2 cu. ft. of perlite, or 50 lbs. of No. 1 white silica sand per 100 lbs. of gauging plaster or “quality” (mill-aggregated) gauging plaster.
3. Gypsum-based finishes should not be used directly over a portland cement basecoat or over concrete block or other masonry surfaces.

## Directions: Mixing
**Mixing**
- Mix double-hydrate limes in a clean container or mechanical mixer. Add one bag of lime to 5-1/2 to 6 gal. of water (21-23 liters) and mix until the putty is smooth. Mix with a portable drill mixer 2-1/2 to 3 min. at 450-600 rpm or with a paddle mixer for 12-20 min. at 50-75 rpm.
- Mix single-hydrate limes in a clean container, using approximately 6 gal. (23 L) of water to each 50-lb. (22.7 kg) bag of lime. For a smooth, plastic putty, machine-mix to a soupy consistency, then pour it into a soaking box and hoe briskly. Let the mix soak for 16 hours and then screen the putty through 8-mesh hardware cloth before using.
- To prepare finish plaster, mix Red Top Gauging Plaster in proper proportion by dry weight (see table) with lime. Over lightweight aggregate basecoat, add 1/2 cu. ft. of perlite fines or 50 lbs. (22.7 kg) of No. 1 white silica sand per 100 lbs. of gauging plaster.

## Application
**Application**
- Apply a tight scratch coat over the entire working area of the of the partially dry basecoat. Immediately double-back with material from the same batch and fill out to a true and even surface nominally 1/16” thick (no more than 1/8” thick). Allow the surface to become firm, then trowel well with water. Final-trowel after finish has begun to set. Surface should be free from cat faces and other blemishes or irregularities.
- Red Top® Gauging Plaster and lime with sand may be used to produce a float finish; however, best results are achieved by using Red Top® Brand Keenes Cement with lime and sand. For float finish coats, scratch in plaster thoroughly and immediately double-back to a true, even surface. Use a sponge, cork, wood, carpet or rubber float to bring the aggregate to the surface to produce a finish of uniform texture, free of slick spots, cat faces and other blemishes. Use water sparingly to prevent variations in texture and finished color.

1. 1/16” thick.

**Application:** For interior use only.

**Compliance with Standards:** RED TOP Gauging Plaster complies with ASTM C28.

**Storage:** Store material in a cool, dry place. Avoid direct sunlight. Maintain temperature above 55 °F (13 °C).

**Shelf Life:** Up to 6 months under protected storage conditions. Rotate stock.

**Availability and Cost:** RED TOP Gauging Plaster is distributed throughout the United States. Contact a United States Gypsum Company sales office for additional information.

**Packaging:** RED TOP Gauging Plaster is available in 50 lb. (22.7 kg) bags.
