Thermal/Acoustical Batt Insulation
**Thermal/Acoustical Batt Insulation**

**Description**
Knauf Thermal/Acoustical Batt Insulation is made from highly resilient, inorganic glass fibers bonded by a thermosetting resin. The products are available unfaced or with kraft, foil or flame-rated FSK-25 (Foil-Scrim-Kraft) foil facings.

**Application**
Knauf batts and blankets are cost-effective thermal and acoustical barriers for energy-efficient construction. Their consistent quality, low dust, and clean-cutting resilient fibers make fabrication easy and installation fast. The products can be used in new and retrofit wood and metal frame applications in residential and commercial structures, as well as in manufactured housing applications. These applications include thermal and acoustical treatments to walls, ceilings and floors.

In addition, High Density (HD) batts are available where optimal thermal performance is required and space for insulation is limited. High Density Cathedral Ceiling Batt, for example, deliver greater R-value in less space, so builders can increase R-values and still maintain adequate space for ventilation.

Knauf QuietTherm® Insulation's excellent acoustical properties reduce sound transmission when properly installed in partition walls, ceilings and floor assemblies. It is primarily used in light commercial applications.

Knauf StapleFree Batt is flangeless kraft-faced batts which friction fit between wood studs, eliminating the need to staple in place, these batts are designed for use in standard 2" x 4" wood framed construction where the stud spacing is no more than 16" on center.

**Residential Applications**
Knauf offers a full line of standard and high-density batts and blankets with a wide range of sizes and R-values. Available unfaced or with kraft or flame-rated (FSK) foil facings, Knauf residential insulation can be used for cavity walls, floors, ceilings, attics, basements and crawlspace. It is highly resilient, recovering quickly to full thickness. It also greatly reduces the transmission of noise in the house.

**Light Commercial Applications**
This full line of standard and high-density batts and blankets for wood and metal frame construction is available unfaced or with kraft, foil or flame-rated (FSK) foils facings. Knauf QuietTherm Insulation can improve STC ratings in wood stud construction by 3 to 5 points and in metal stud construction by 8 to 10 points, depending on the complexity of the wall configuration and layers of insulation. Knauf's commercial building insulation can be used for exterior and partition walls, floors, crawlspace and a variety of ceiling applications.

**Manufactured Housing Applications**
Knauf Manufactured Housing Insulation has a full line of batts and blankets with a wide range of R-values, lengths and widths. It is designed to work efficiently with pre-manufactured structures of all widths. Available unfaced in widths up to 192" (4.88 m) or with kraft facing in widths up to 24" (610 mm), it can be used for cavity walls, partition walls, floors and ceiling applications.

**Features and Benefits**
**Proven Performance**
- Preferred by professional installers concerned with quality, appearance and productivity.
- Excellent acoustical properties reduce sound transmission in the home when properly installed in partition walls and ceiling and floor systems.

**Superior Handling**
- All Knauf faced products feature an extra wide stapling flange for faster and easier installation.
- Highly resilient insulation recovers quickly to full thickness for a snug fit and superior finished aesthetics.
- Consistent quality materials cut easily, install fast.
- Durable facing resists tears and is marked in one-foot increments for faster field fabrication.
- Low dust and friendly fibers for easier handling and more productivity.

**Convenient Packaging, Easier Handling**
- Knauf batt insulation is packaged in a strong, white poly bag that offers excellent protection from abuse, dust and moisture.
- Our packages feature complete installation instructions and a highly visible color coding system which follows industry standards and makes Knauf product sizes and specifications that are easy to read.
- Knauf's unitized packaging saves time at the jobsite, saves space at the warehouse.
- Master bag batt units ensure reduced handling costs with greater compression—more square feet per bag, more square feet per truckload, fewer trips to the job site and less warehouse space for storage.

**Superior Service and Support**
- Prompt, on-time delivery helps control inventory costs and meet customer expectations.
- Our committed network of distributors assures fast order fulfillment and faster inventory turns.
- 24/7 access to product submittals ensure product acceptance and help you meet quotation deadlines.
Specification Compliance
- ASTM C 665; Type I, Class A (unfaced)
- ASTM C 665; Type II, Class C (Kraft faced)
- ASTM C 665; Type III, Class A (FSK-25 foil faced)
- ASTM C 665; Type III, Class B (foil faced)
- Greenguard Certified
- Greenguard For Children and Schools™ Certified
- California Energy Commission
- Dade County, Florida
- MEA #498-90-M
- State of Minnesota

Technical Data
Surface Burning Characteristics
- Unfaced and flame-rated (FSK) foil faced products do not exceed 25 Flame Spread, 50 Smoke Developed when tested in accordance with ASTM E 84.
- Kraft facing will burn and should not be left exposed.

Thermal Value
- Thermal resistivity (R-value) is determined using industry standard test method ASTM C 518.

Water Vapor Permeance (ASTM E 96)
- Kraft faced products have a water vapor permeance of 1.0 or less.
- FSK foil faced products have ratings of .04.
- Foil faced products have ratings of .05.

Water Vapor Sorption (ASTM C 1104)
- Less than 5% by weight.

Corrosion (ASTM C 665)
- No greater than sterile cotton.

Microbial Growth (ASTM C 1338)
- Does not support microbial growth.

Noncombustible (ASTM E 136)
- Unfaced insulation is non-combustible.

Acoustical Performance
Knauf’s batt insulation provides excellent acoustical properties and will reduce sound transmission when properly installed in partition walls and acoustical ceiling and floor systems. Knauf acoustical/thermal insulation can improve STC ratings in wood stud construction by 3 to 5 points and metal stud construction by 8 to 10 points depending upon the complexity of the wall configurations, R-values and layers of insulation.

The STC Ratings table below illustrates in a commercial application, the improved STC Ratings using Knauf acoustical/thermal insulation compared to no insulation.

Fiber Glass and Mold
Fiber glass insulation will not sustain mold growth. However, mold can grow on almost any material when it becomes wet and contaminated with organic materials. Carefully inspect any insulation that has been exposed to water. If it shows any sign of mold, it must be discarded. If the material is wet, but shows no evidence of mold, it should be dried rapidly and thoroughly. If it shows signs of facing degradation from wetting, it should be replaced.

Notes
The chemical and physical properties of Knauf Batt Insulation represent typical average values determined in accordance with accepted test methods. The data is supplied as technical service and is subject to change without notice. References to numerical flame spread ratings are not intended to reflect hazards presented by these or any other materials under actual fire conditions. Check with your Knauf Insulation sales representative to assure information is current.

Knauf batt insulation is highly resilient—recovering quickly to full thickness when removed from the package.

Knauf manufactures a full line of batt and blanket insulation with a wide variety of widths, R-values, densities and facings.

Knauf QuietTherm Insulation’s excellent acoustical properties reduce sound transmission when properly installed in metal frame buildings.

Wall Insulation: Whenever exterior siding is removed on an Uninsulated wood-frame wall:
- Drill holes in the sheathing and blow insulation into the empty wall cavity before installing the new siding, and
- Zones 3-4: Add R5 insulative wall sheathing beneath the new siding.
- Zones 5-8: Add R5 insulative wall sheathing beneath the new siding.

Insulated wood frame wall:
- For Zones 4-8: Add R5 insulative sheathing before installing the new siding.
